Blow pipe, bear claw, or heatlance must be equipped with a debris containment attachment to prevent property damage or personal injury due to flying rocks and debris.

1.2.1 Preparation equipment required. At the discretion of the engineer the following equipment is to be used and have readily available on a daily basis in order to achieve the proper "ready to seal" joint or crack.

1.3 SEALING & EQUIPMENT REQUIREMENTS: The joint sealant compound shall be applied uniformly solid from bottom to top and shall be filled without formation of entrapped air or voids. The heating kettle shall be an indirect heating type, constructed as a double boiler, with a capacity of 200 U.S. gallons minimum. A positive temperature control and mechanical agitator shall be provided. The sealant shall not be heated to more than 20 degree Fahrenheit within the safe heating temperature.

The safe heating temperature can be obtained from the manufacturer's shipping container. A direct connecting pressure type extruding device with nozzles shaped for insertion into the joint shall be provided. V squeegee excess material into cracks and joints when necessary.

Spray surface of sealant with a release agent like Glenzoi Z or Detack using a pump or sprayer to prevent tracking of sealant if roadway is opened to traffic before sealant is sufficiently cool and set. (Avoid tracking when necessary).

1.4 JOINT & CRACK PAYMENT: Payment will be made by the linear foot of material in place.

- The Cracksealing / Joint Repair portion of this contract has been divided into 4 separate line items (0010, 0020, 0030, & 0040) with varying ranges for footage of work to be completed. The Parish will attempt to issue multiple projects in a general area simultaneously, so as to make it more cost effective for the Contractor to complete the work. Though each individual project (Work Order) may be small and fall within a smaller range line item, it will be the sum of the footages of all the individual projects (Work Order) when issued simultaneously that will determine the price per foot for each work order. See the example below.

1. Work Order (W.O.) #1001 is issued for 500 feet of crack sealing
2. Work Order (W.O.) #1002 is issued for 800 feet of crack sealing
3. Work Order (W.O.) #1003 is issued for 1000 feet of crack sealing
4. Work Order (W.O.) #1004 is issued for 1800 feet of crack sealing
5. Work Order (W.O.) #1005 is issued for 2350 feet of crack sealing

If each of these work orders were issued individually, at separate times and in different areas throughout Jefferson Parish, then W.O. #1001, #1002 and #1003 would each be paid at the unit cost of Line Item 0010. W.O. #1004 would be paid at the unit cost of Line Item 0020. W.O. #1005 would be paid at the unit cost of Line Item 0030.

REVISED PER ADDENDUM 1

If only Work Orders #1002 & #1004 were issued at the same time in the same general area (i.e. same neighborhood with a maximum of 10 x 10 block area), then the total footage issued would be 2600 feet, and both of these 2 locations would be paid at the unit cost of Line Item 0030.

If all 5 of these Work Orders were issued at the same time in the same general area (i.e. same neighborhood with a maximum of 10 x 10 block area), then the total footage issued would be 6,450 feet, and all 5 locations would be paid at the unit cost of Line Item 0040.

THE FOLLOWING SPECIFICATIONS WILL APPLY TO ITEM 0050:

- 2.1 **SPALL AREAS:** Spall concrete areas measuring 2" wide or greater are to be filled with "UPM" cold patch, or equal. Tac coat emulsion shall be applied prior to filling. Cold patch to be compacted to surrounding grade.
- 2.2 **PREPARATION OF SPALL AREAS:** Remove loose concrete fragments and prepare as "See Section 1.2 and 1.2.1".
- 2.3 **SPALL PAYMENT:** Payment will be made by the linear foot of cold patch in place.

THE FOLLOWING SPECIFICATIONS WILL APPLY TO ITEMS 0060 & 0070:

All work pertaining to seal coat for jogging tracks and bicycle paths shall conform to Gem Seal, Inc., or equal, heavy duty pavement sealer and detailed application specifications. Any other alternate used shall be pre-approved.

- 3.1.2 The refined tar prior to emulsification shall conform to ASTM D-490, Grade RT-12. The refined tar shall be derived from high temperature coke oven tar. Oil and water gas tars shall not be used even though they might comply with ASTM D-490, Grade RT-12.
- 3.1.3 The emulsion shall be produced using a colloid mill to insure homogeneity and appropriate size of the particles in suspension.
- 3.1.4 The contractor and/or his supplier will provide a certification with each bulk emulsion delivery indicating compliance with the above requirements. Further, the certificate will indicate the non-volatiles (solids) content and ash content of that particular transport lot as determined by results of tests performed on material loaded. Such certifications shall be subject to verification by testing samples of the emulsion received for use on the project. Costs of verification testing should be done by the project administrators.
- 3.2 Dilution water shall be potable and free of excessive minerals and contaminants. Water will be provided by the project administrator and available within a reasonable distance from the job site.

All methods employed in performing the work and all equipment necessary for executing any part of the work shall be subject to approval by the project administrator before work is started and when found unsatisfactory will be corrected. All equipment will be in good working condition.

4.1 Spray equipment used on the job shall have mechanical mixing devices incorporated in their construction to assure homogenous mixing of the emulsion and required additives. The pumping system must be adequate to apply a uniform coating at the specified rate of application. Equipment requiring pressurization of the mixing tank for distribution will not be used.

4.2 Motorized squeegee application equipment used on the job will have two or more devices, such as squeegees and/or drag broom assemblies to assure even distribution of the tar emulsion system. Mechanical mixing devices will be incorporated into the construction of the applicator to assure homogenous mixing of the emulsion and required additives.

4.3 Mixing or agitating equipment may be either portable powered or a tank-type power mixer. In any case, mixers shall be of sufficient capacity to assure homogenous mixing of the emulsion and required additives and to maintain complete suspension of mineral aggregate until the emulsion system is applied to the pavement. All storage tanks or drop tankers shall be equipped with mechanical agitators sufficient to keep the coal tar emulsion homogenous during storage.

REVISED PER ADDENDUM 1

5. PREPARATION OF SURFACES, APPLIES TO 0010 - 0070:

- 5.1 Allow new asphalt to cure. Cure time varies with type of asphalt, aggregate, weather conditions and construction procedures. Hot mix asphalt will usually cure in 30-90 days. Cold mix pavements should have at least 90 days to cure. Required cure time should be determined by the project administrator and a written order to proceed will be furnished to the contractor.
- 5.2 Wide cracks, extensive alligator cracking patterns, soft or sunken spots indicate that the pavement and/or base should be repaired or replaced. Extensive patching shall be allowed to cure prior to sealcoating in accordance with 5.1.
- 5.3 Thoroughly inspect the pavement for minor cracks and other imperfections. Ignore hairline cracks. Cracks of approximately $\frac{1}{4}$ - $\frac{3}{4}$ inch wide should be cleared of debris and filled with a Gem Seal approved crack sealant, or equal in accordance with manufacturer's specification. (Optional)
- 5.4 Remove oil and grease spots that have not permanently damaged or softened the pavement, by scrubbing with a detergent and flushing with water until a water-break-free surface is obtained. Oil and grease spots with deeper penetration will be treated by burning with hand held propane torch and then coating the spot with an approved oil spot primer such as Tar-Prime. If the oil spot is so severe as to cause permanent deterioration of the pavement or if the pavement has failed due to other causes, the pavement shall be removed to the full depth of the damage and replaced with new asphalt pavement in accordance with Paragraph 5.1.
- 5.5 Old traffic control lines may be blackened with black epoxy or black acrylic coatings. Excessive build-up of lines should be abraded before any prime coats of asphalt or tar emulsion are applied. (Optional)
- 5.6 Highly oxidized or weathered surfaces shall be primed. Prime with SS-1, SS-1h, CSS-1, CSS-1h asphalt emulsion or with Gem Seal tar prime coal tar emulsion, or equal. Asphalt emulsions shall be diluted one part asphalt emulsion to 5 parts potable water and uniformly applied to the pavement at a rate of 0.10+0.02 gallon per square yard. Tar prime shall be diluted one part tar primer to two parts water and applied at a rate of 0.07-0.10 gals. per square yard. The prime shall be allowed to cure for 24 hours before applying pavement sealer. (Optional)
- 5.7 Immediately before application of sealer, clean the surface of all loose dust, dirt, leaves and any other foreign materials by sweeping, blowing, flushing with water, or any combination of the three.

6. MIX DESIGN & APPLICATION RATES

SPECIAL PROVISIONS:

JOB MIX FORMULA FOR ROUGH SURFACE (#0060)

Squeegee coat/1 spray coat (for moderate to heavy oxidized surfaces) application methods, rates and formulations of coaltar.

REVISED PER ADDENDUM 1

MIX APPLICATION	GAL. OF H2O/ GAL. OF EMULSION	LBS. OF SAND/ GAL. OF EMULSION	GAL. OF LATEX/ GAL. OF EMULSION	APPL. RATE GAL./SQYD
1 ST COAT SPRAY	.60	6	.06	.30-.35
2 ND COAT SPRAY	.40	2	.02	.15

JOB MIX FORMULA FOR SMOOTH SURFACE (#0070)

Two (2) spray coats (for new, smooth or lightly oxidized surfaces)

MIX APPLICATION	GAL. OF H2O/ GAL. OF EMULSION	LBS. OF SAND/ GAL. OF EMULSION	GAL. OF LATEX/ GAL. OF EMULSION	APPL. RATE GAL./SQYD
1 ST COAT SPRAY	.40	2	.02	.15
2 ND COAT SPRAY	.40	2	.02	.10

GAL. = GALLON

NOTE: 1. Sealcoating is not recommended for enclosed or permanently shaded parking areas such as underground parking garages.

2. Approximately 20 pounds of sand displaces 1 gallon of liquid.

WARNING: Sealcoats, when improperly applied and/or under certain environmental conditions may become slippery. As with any paint-like coating, repeated applications reduce texture. Skid resistance can be improved with additions of 3 to 5 pounds of sand per gallon. **CAUTION MUST BE EXERCISED**, particularly when skid resistance is a major safety factor.

6.2 LATEX ADDITIVES: The latex additive will be added at the specified rate as indicated in the job mix formula +0.25%. Undiluted latex will first be diluted with an equal volume of water and added slowly to the emulsion after mix water and prior to the addition of any sand. Latex will be added while the mixer is in operation to assure uniform dispersion and no coagulation of the latex. Diluent water added to the latex will be considered part of the mix water required in Paragraph 6.1.

6.3 Sand will be slowly added after the mix water and any required latex additives have been dispersed into the tar emulsion. Again, the mixer will be in operation during the addition of the sand to assure uniform dispersion and to prevent overloading of the mixing device. Additional amounts of water may be added, if necessary, should the tar emulsion system become too thick to be uniformly applied. Additional water will be added only after the

REVISED PER ADDENDUM 1

project administrator has been notified and additions will not exceed those amounts expressly stipulated by the project administrator.

- 6.4 Slow mixing shall be continuous from the time all materials are placed into the mixer until the pavement sealer mix is applied by the application equipment. During the entire mixing process, no breaking, segregating, or hardening of the emulsion and no balling or lumping of the aggregate shall be permitted.
- 6.5 The coating shall be applied uniformly over the entire pavement surface and free of voids and pinholes. When pavement temperatures are in excess of 120 degree F, fog spraying of pavement with clean water is recommended to achieve better bond and even spreading of material. Fog spray shall dampen pavement without leaving puddles. (Optional)
- 6.6 Subsequent coats will be applied only after the previous coat is dried, preferably 24 hours later, but no less than 4 hours under ideal conditions. Ideal conditions are temperatures in excess of 70 degrees F, sunshine and less than 60% relative humidity. Marginal conditions can require curing times greater than 24 hours. Subsequent coats should be applied at right angles to the previous coat, if possible.
- 6.7 Sealer will not be applied unless the temperature is a minimum 50 degree F and rising and pavement temperature is 60 degrees F and rising. Work will be completed so that there is a minimum of two (2) hours of direct sunlight remaining after completing the day's work. Sealer will not be applied under rainy or wet conditions such as an overcast sky with high humidity. **UNDER NO CIRCUMSTANCES** will work be performed under cold and/or wet conditions, nor will tar emulsion be used that has been subjected to freezing weather.

INCIDENTALS:

- 7.1 The contractor and project administrator will coordinate their activities with each other to insure the availability of the work area, so as not to delay the execution of the project, to maintain traffic flow and to minimize activities that might be detrimental to the work in progress, such as automatic sprinkler systems, other customer or construction traffic, etc.
- 7.2 The contractor will notify the project administrator of pavement areas that he feels have so deteriorated, or have other outside factors, such as poor drainage, improper construction, etc. that will render the application of a seal coat ineffective.
- 7.3 Striping will be done with a latex or acrylic paint, approved by the manufacturer. No striping will commence until the seal coat to be striped has cured for at least 24 hours.

THE FOLLOWING SPECIFICATIONS WILL APPLY TO ITEM 0080:

Asphalt or PCC Saw-Cut, per inch depth – Machine saw-cuts in concrete/asphalt shall be paid for by linear foot of cut for each inch of depth. The lengths and depths shall be pre-approved by parish representatives and measured in the field.

SPECIAL PROVISIONS:

It is the sole responsibility of the contractor, at their expense and at no additional cost to Jefferson Parish to provide any and all traffic controls, flagmen, arrow boards, signs, etc., that may be needed when working on main thoroughfares and arteries.

REVISED PER ADDENDUM 1

If police officers are needed to provide traffic controls, it is the sole responsibility of the contractor, at their expense and at no additional cost to Jefferson Parish, to make the necessary arrangements.

Workorders for all non-residential streets and heavy traffic residential arteries require a ten (10) day notification to the Streets Department prior to startup of work.

Some heavy traffic thoroughfares and arteries may require after hours or night time scheduling. A fourteen (14) day notice must be given to the Streets Department by contractor prior to scheduling of any night, weekend, or after hours work. There will be no overtime or pay differential allowed for this work.

General - It shall be the duty of every parish officer, employee, department, agency, special district, board, and commission; and the duty of every contractor, subcontractor, and licensee of the parish, and the duty of every applicant for certification of eligibility for a parish contract or program, to cooperate with the inspector general in any investigation, audit, inspection, performance review, or hearing pursuant to this chapter. Every parish contract and every bid, proposal, application or solicitation for a parish contract, and every application for certification of eligibility for a parish contract or program shall contain a statement that the corporation, partnership, or person understands and will abide by all provisions of this chapter.
