Customer Adaptation (CA) options and relocated components are not represented in these images. Most CA options impact the variation of the image, thus an image may not populate. Calculations are approximate to a tolerance of ± 4 inches due to component mounting variation. Certain chassis component options are NOT represented in the Top View image, such as, but not exclusive to, Front Frame Extensions, Fuel Water Separators, Air Dryers, PTOs, Fifth Wheels, Chassis Fairings, Toolboxes, Trailer Connections. Tests have shown that the true location of the turning center is further to the rear than midway between drive axle sets (where applicable)

- The actual location of the turning center depends on:
- Whether the drive tire equipment is single or dual.
 - The overall load distribution for the vehicle (front/rear, between drive axles) in a loaded condition
 - Manufacturing tolerances within the steering components
