- 2.4** The polymers shall be suitable for storage in plastic vessels and shall have a shelf life in the storage tank of no less than six months. The freeze-thaw recovery of the polymer shall be at least 90%. The polymers should be mixable with water in all dilutions, and should be able to be diluted to any ratio desired to meet the chemical feed capacity.
- 2.5** The polymers shall have the following general properties:
- Appearance - viscous liquid
  - Solubility - soluble in water in all proportions
- 2.6** The polymers application shall decidedly improve the operation of the belt filter press, and attain the following performance:
- Feed solids - 1.5% - 3.5%
  - Hydraulic loading - 100-300 gpm
  - Minimum cake solids - 16%

Minimum solids capture - 85%

Filtrate quality - less than 1,000 mg/1 tss

### **3.0 TESTING PROCEDURE:**

- 3.8 At the department's request, the bidder must provide additional testing during the contract period, should performance of polymer become an issue. Additional testing will only be required if performance requirements are not met. The bidder must be willing to adjust and supply the optimal polymer to meet performance requirements.

## 12. Ecological Information

### Aquatic toxicity

*Information on: cationic polyacrylamide*  
*Assessment of aquatic toxicity:*

*The hydrolysis products are not acutely harmful to aquatic organisms. Acute effects on aquatic organisms are due to the cationic charge of the polymer, which is quickly neutralised in natural water courses by irreversible adsorption onto particles, hydrolysis and dissolved organic carbon. Fish toxicity and aquatic toxicity are drastically reduced by rapid irreversible adsorption onto suspended and/or dissolved organic matter.*

### 16. Other Information

**NFPA Hazard codes:**

Health : 1      Fire: 1      Reactivity: 0      Special: -

**HMIS III rating**

Health: 1      Flammability: 1      Physical hazard: 0

NFPA and HMIS use a numbering scale ranging from 0 to 4 to indicate the degree of hazard. A value of zero means that the substance possesses essentially no hazard; a rating of four indicates extreme danger. Although similar, the two rating systems are intended for different purposes, and use different criteria. The NFPA system was developed to provide an on-the-spot alert to the hazards of a material, and their severity, to emergency responders. The HMIS system was designed to communicate workplace hazard information to employees who handle hazardous chemicals.
