Hose Construction

This hose is designed specifically for aggressive fire attack operations and is recommended for low pressure, nozzle applications. The outer jacket is woven from a high spun staple polyester yarns over an inner inner consisting of a one-ply braided through-the-weave nitrile/PVC tube. Color is clear for abrasion resistance. "Key-Lock" process is standard. Combat Sniper is manufactured in a high-visibility fashion with four black and green stripes running the length of the hose. This mark, abrasion and heat resistant hose shall have superior friction loss characteristics. Lengths available up to 75'. Warranty: Hose shall carry a 10-year written warranty, which includes a 1-year all-hazards warranty.

Inner Hose Properties

When the hose is tested in accordance with NFPA 1051, the inner shall have the following properties:

- Ultimate Tensile Strength - Shall not be less than 1200 psi.
- Ultimate Elongation - Shall not be less than 200%.
- Accelerated Aging Test - Shall meet requirements of UL 19 for accelerated aging.
- Adhesion - Sawyer test: conformant and inner shall be a minimum of 20 pounds.
- Ozone Resistance - Shall show no signs of visible cracking of the cover of inner when tested in accordance with ASTM D 1149-91 and ASTM D518-95 (R91), Procedure B.

PRECISE HANDLING

Safety Factors

Abrasion Resistance - A direct relationship to the safe performance of the fire hose. The UL abrasion test most closely resembles the live ground use of fire hose end as such, is considered of prime importance. Hose meeting all of the abrasion resistance safety factors below shall do so without exceeding average weights.

UL Abrasion - The hose shall pass a burst test after 5000 cycles on a retracting abrasion tester - as specified in UL Standard 19.

UL Heat Resistance Safety Factor - Hose shall be capable of safe use down to 28°F. The hoses shall have no apparent damage to cover after 1000 cycles of flexing when subjected to the following cold flexibility test: a 50' length of 1 1/2" hose is coiled and placed in a cold box at 65°F for a duration of 24 hours. Immediately after removal of the hose from the box, hose should be uncoiled and laid out by one operator.

Flameover Heat Resistance Safety Factor - Heat resistance is of the utmost importance when evaluating interior attack hose. This hose shall meet the safety factors for heat resistance without exceeding the normal life nose weight.

Water Pick-up Weight - The tendency for a hose to absorb water while in a water environment can create significant handling difficulties. When tested against the procedure listed in MIL-H-24806 latest edition, the maximum weight gain shall not exceed 3 pounds per 50' length.

Inside Diameter

The finished inside diameter of Combat Sniper hose shall be 1.78" respectively, with a tolerance of 1.2% when measured according to UL-19 standards.

Couplings

Combat Sniper shall be supplied with aluminum 6061-T6 USA manufactured couplings. Knurled couplings and other custom features available upon special request. Barcode recess available at additional charge.
