**Butterfly Valve for Jefferson Parish Department of Public Works – Water (East Bank)**  
**(for replacement of Pratt R1A Butterfly Valve, MDT Gear & Cylinder for Filter Wash Water).**

**30 inch Pratt Type XR-70 150B Flanged Butterfly Valve-JPWTP Version (Functional Duplicate of Pratt Valve Package, with originally included options and features as previous valve provided on Pratt Job S015748-9 without solenoid manifold). Class 150B Valve with MDT-5 Gear Actuator (with Position Indicator), 12x11 Duracyl Non-Metallic Cylinder Actuator for Dual Speed Controls, Manual Over-Ride; MDT to be equipped with back-up Hand Jack.**

In strict accordance with the below specifications:

Butterfly Valve shall be of the tight-closing, rubber-seat type with rubber seats that are securely fastened into the valve body. (Seat on Disc design is prohibited). No metal-to-metal seating surfaces shall be permitted. Valve shall be bubble-tight at rated pressure with flow in either direction and shall be satisfactory for applications involving operations after long periods of inactivity.

Valve body shall be constructed of ASTM A-126 Cast Iron. Ends shall be Flange Type.

Valve disc shall be ASTM A-536 Ductile Iron with CF-8M Stainless Steel edge cover.

Valve shaft shall be turned, ground, and polished, and constructed of 18-8 304 Stainless Steel.

All seats shall be Buna-N synthetic rubber compound. Seats shall be retained in the valve body by mechanical means without retaining rings, segments, screws, or hardware of any kind in the flow stream, and protected from high velocity by recess mounting in the valve body. Seats that use rectangular epoxy keys and non-metallic cartridge inserts are not acceptable. The seat and disc mating edge shall be of a design that allows up to one (1) degree off center tolerance in the closed position without leakage.

Valve shall be fitted with sleeve-type bearings. Bearings shall be corrosion resistant and self-lubricating. Bearing load shall not exceed 1/5 of the compressive strength of the bearing or shaft material. Bearings must be Teflon lined.

Shaft seals shall be self-adjusting chevron type. Shaft seals shall be of a design allowing replacement without removing the valve shaft.

MDT-5 valve actuator unit shall be traveling nut type and shall be fully grease packed. The actuator shall have stops in the open/closed position. The valve actuator shall have a mechanical

stop in the actuator, which will withstand an input torque of 450 ft./lbs. against the stop. The traveling nut shall engage alignment groove in the housing.

The MDT-5 actuator shall have a built-in packing leak bypass to eliminate packing leakage into the actuator housing.

All surfaces of the valve shall be clean, dry, and free of grease before painting. Standard Pratt/Jeff Parish painting applies. The valve surfaces except for the disc edge, rubber seat and finished portions shall be evenly coated with a suitable primer (in compliance with Federal Specification TT-C-494B and AWWA Standard C504). Valve/Actuator packages meeting the general criteria of the subject AWWA standard but not meeting all additional requirements of this specification will not be acceptable.

Valve must be in full compliance with AWWA C504-87 Standard, Class 150B and equal in all respects to Pratt Model XR-70, manufactured by the Henry Pratt Company; with required gear unit, Duracyl non-metallic Cylinder, and other hardware listed above.

#### MDT-5 Manual Actuator

Manual actuator gear unit shall be of the traveling nut, self-locking type and shall be designed to hold the valve in any intermediate position between fully open and fully closed without creeping or fluttering. Actuator shall be equipped with mechanical stop-limiting devices to prevent over travel of the disc in the open and closed positions. Valve shall close with a clockwise rotation. Actuator shall be fully enclosed and designed to produce the specified torque with a maximum pull of 80 lb. on the hand crank. Actuator components shall withstand an input of 450 ft.lbs. at extreme operator position without damage. Manual actuator shall be Pratt MDT-5 type.

#### Cylinder Actuators

Cylinder actuator for the quarter turn valve shall be of double acting non-metallic type design utilizing a cast iron head traveling nut, AWWA style gear of scotch yoke or link and lever design. The non-metallic Pratt 12x11 Duracyl Cylinder shall have a kinetic rod/shaft suitable for integrating directly into the MDT Actuator unit without modification or additional hardware of a third-party.

The cylinder actuator shall meet the requirements of this specification and the requirements of AWWA C-504 and C540. Cylinder actuator shall move the valve to any position from full open to full closed with a maximum of 125 lbs. and a minimum of 40 psig of air, oil or water pressure applied to the cylinder. All wetted parts of the cylinder must be non-metallic except for the cylinder rod (shaft) and tie rods, which shall be 18-8 Stainless Steel.

Rod seals shall be of non-adjusting wear compensating type. Rod wiper for removing deposits inside the cylinder shall be provided in addition to the external dirt wiper. The piston design shall be three-piece with L-shaped cup seals.

The crosshead shall have integral tracks in the housing and dove to prevent side loading of the traveling nut. A relief shall be provided between the valve body and housing to vent line fluid to atmosphere. A manual hand crank mechanical over-ride shall be provided on the cross head.

Cylinder actuator shall be controlled by an existing Pratt 8344 4-Way Solenoid Manifold (configured for potable water as an operating media) to serve as main control valves for the new dual acting cylinder, as is now done for the existing Duracyl on the original R1A valve.

#### Warranty

The Standard Warranty of the Henry Pratt Company must be included with the subject valve/actuator package (at no additional cost). Bidder must be an authorized representative of the Henry Pratt Company with full authorization to perform warranty service at Jefferson Parish.

### **Changes to Jefferson Parish Bidding Information**

The Jefferson Parish Purchasing Department would like to make vendors aware of the following changes:

**Total Bid Price Must Include the Cost of Naming Jefferson Parish as Additional Insured:**

Bidder acknowledges that Bidder recovered the cost of any required insurance in the contract price as required by La.R.S. 9:2780.1 and that Bidder recovered any such cost for the purposes of insuring an obligation to indemnify Jefferson Parish, defend Jefferson Parish, or hold Jefferson Parish harmless and that Bidder's indemnity liability is limited to the amount of the proceeds that are payable under the insurance policy or policies that Bidder has obtained.

**Electronic Procurement:** Beginning November 1, 2020, Jefferson Parish will no longer accept manual bid submissions; and will only accept bid submissions electronically via our e-Procurement system, Central Bidding. Central Bidding can be accessed by visiting either [www.centralbidding.com](http://www.centralbidding.com) or [www.jeffparishbids.net](http://www.jeffparishbids.net). All bidders will be required to register with Central Bidding. Jefferson Parish vendors are able to register for free by accessing the following link:  
<https://www.centrauctionhouse.com/registration.php>.

**Probable Construction Cost:** Per Jefferson Parish Administrative Policy, the probable construction cost is not revealed in the Jefferson Parish Bidding Documents. Jefferson Parish Administrative Policy has changed and a range of the probable construction cost will be stated in the Jefferson Parish bidding document, entitled Important Notice to All Bidders – Bid Requirements. Per Louisiana Public Bid Law, the probable construction cost will be read at the bid opening.

**Insurance Requirement:** All bidders must provide proof of valid insurance in the required amounts as stated in the Standard Insurance Requirements for bidding purposes. Failure to provide the proof of valid insurance in all of the required coverage amounts will result in bid rejection.
