Revision July 26, 2013

IMPACT RECOVERY SYSTEMS, INC.
PRODUCT SPECIFICATION
TUFF CURB XLP LOW PROFILE TRAFFIC SEPARATOR CURB SYSTEM
MARCH 2011

I. SCOPE

This specification covers the minimum material and performance requirements for the Impact Recovery Systems Tuff Curb XLP Low Profile Traffic Separator Curb System. This system was developed for use in high speed, high traffic applications such as HOV and HOT lanes, channelization of traffic on freeways, for acceleration lanes, to separate vehicular and bike/pedestrian traffic, or anywhere that pavement markings are insufficient to provide safe channelization of traffic. In addition, XLP's ability to be affixed to pavement with the use of epoxy makes it ideal for use on bridge decks, in tunnels, and parking structures where deck penetration may compromise imbedded steel or post tensioning.

II. GENERAL REQUIREMENTS

A. DESIGN

The Impact Recovery Systems Tuff Curb XLP Traffic Separator Curb System shall be fabricated to withstand repeated impacts with minimal maintenance to the unit, and minor damage to the impacting vehicle. The system shall incorporate modular sections of low profile curbing which may or may not interconnect, and each section shall be anchored independently. The system is comprised of 40" curb sections and is available with a connector (Turtle) which can be used to connect the sections, dependent upon end users' design requirements. Additionally, the system shall be available with a wide variety of quick-release channelizing devices, including hazard markers (Type 3), vertical panels, delineators, tubular markers and sergeant stripe units. Each 40" section of curb shall have two arched glass element technology reflectors to provide maximum nighttime visibility for motorists. It is recommended that uprights be installed on each 40" section, in addition to these reflectors to increase conspicuity, especially at night. The channelizing devices shall incorporate either a flexible post or post and panel assembly, and shall utilize a reactive spring device to absorb the stress from the impacting vehicle. The system shall allow the replacement of uprights in no more than 5 seconds without the use of tools. Spring assembly shall have an anti-twist feature to assure channelizer is returned to an upright position facing traffic.

B. MATERIALS

B.1 CURBING

Curbing shall be composed of injection molded HDPE material which is resilient, and featuring solid color throughout, eliminating the need to repaint scuffed surfaces. Tuff Curb XLP shall not exceed 2" in height or 8" in width. It shall possess gently sloping sides in order to facilitate crossover by emergency or errant vehicles. Curbing sections may or may not interconnect, but have the ability to space sections to facilitate passage of water between sections of curb. If sections are connected with the Turtle, 2" spacing must be maintained.

B.2 CHANNELIZER

All channelizers must conform to the Manual of Uniform Traffic Control Devices.

- a. Type III Hazard (Object) Marker available in 8" (8" x 24" with 36" overall height) or 12" (12" x 36" with 48" overall height). Hazard Marker will contain flexible high intensity reflective sheeting with black diagonal stripes.
- b. Delineator Post available in 36", 42" or 48" heights, in standard colors of yellow, white and orange. Delineators shall contain a 14" "squeeze" at the top and be designed to receive a 3" x 12" section of high intensity reflective sheeting on one or both sides.
- c. Tubular Markers available in 36", 42" and 48" heights, standard colors of yellow, white and orange. Tubular Markers shall contain a 2" "squeeze" at the top and be designed to receive two bands (or more) of 3" high intensity reflective sheeting.
- d. Vertical Panels available in 8" (8" x 24") or 12" (12" x 24") with a 36" overall height. Vertical Panels will contain white flexible high intensity reflective sheeting with a 4" orange stripe.

C. WORKMANSHIP

The Impact Recovery Systems Tuff Curb XLP System shall exhibit good workmanship and shall be free of burns, discoloration and other objectionable marks or defects, which affect appearance or serviceability.

D. INSTALLATION

Installation and deployment shall be per manufacturer's recommendations or as directed by the specifying engineer. Curb spacing recommendation is no less than 1" apart, and no more than 3" for visual considerations, or if drainage or other considerations warrant additional space, a larger gap is acceptable. Installation shall utilize 5/8" x 3" zinc plated lag bolts and mungo sleeves for asphalt installations, 1/2" x 4" wedge anchors for concrete installations, and epoxy or Super Bundy pads for bridge, tunnel or parking structure applications. Curb section shall be equipped with quick release bolts unless otherwise specified.

III. REFLECTIVE SHEETING

The reflective material used on the channelizer shall be made of flexible, high intensity or diamond grade, impact resistant, pressure sensitive sheeting which shall be subject to approval by the ordering agency.
