The flexible expansion split portion of the waistband shall be to the front of the trouser side seam and there shall be an inch wide side belt loop positioned to "hide" the expansion split of the waistband.

The waistband curtain shall consist of two different styles for maximum waistband expansion to enhance wearer comfort, fit, and appearance. The front of the trouser (to the expansion split) waistband curtain style shall consist of a 2-inch wide elastic section that incorporates Tru-Grip, a 1/2" surface area composed of thin 55 gauge rubber for maximum comfort and performance. The Tru-Grip acts to help keep shirts tucked in securely. (Use of a single silicone strip or strips instead of 1/2" wide rubberized surface area shall be cause for disqualification.)

The back half of the trouser waistband curtain shall finish a minimum 2-1/8" wide

The fly lining shall be sewn to the left fly continuing below the zipper into the crotch area in a neat and durable manner. A button shall be located on the left fly corresponding with the French Fly tab to provide a clean and comfortable closure. Topstitching of fly to be installed with automatic "J" stitch equipment eliminating puckering and providing a clean finish. There shall be a firm straight bartack at the bottom of the fly going through the zipper tape for maximum strength. Bartack shall line up with starting point of "J" stitch.

JEFFERSON PARISH FIRE DEPARTMENT STATION WEAR TROUSER

SIZING: The Poly/Cotton trouser pattern is fully graded such that all vital dimensions change according to waist size. The grade applies to seat, front rise, back rise, thigh, knee and bottom opening measurements. Certain critical dimensions for men's regular rise trousers are as follows:

TALL: ADD ½" to front and back rise, with 38" unfinished inseam.

STITCHING: All thread tension is evenly maintained to eliminate tight or loose stitching. All seam allowances are maintained so that there are no raw edges, run offs, twists, pleats, puckers, or open seams.

SLIDE FASTENER: Slide fastener (fly zipper) shall consist of solid brass hardware on colorfast nylon 7/16" tape. Chain size #45Y. Style 45YGS5 slider and ratcheting chain to prevent breakage of chain teeth.

WAIST CLOSURE: Primary waist closure is two hooks and bars construction, mounted on the waistband using rustproof nickel plated steel hardware as follows: Size 85 bar and bar internal reinforcement plate. Size 8 hook and hook internal reinforcement plate. Internal reinforcement tape 7/8" wide shall be mounted between the plates and the body fabric to insure construction integrity for extended wear life.

TAILORED WAISTBAND: The waistband is full dress style including all tailoring detail of construction. It is assembled from internal construction fabric to finish 2" wide with 1/4" extension. Approximately 2" of additional waistband length shall be turned at the center back seam to permit alterations of up to 1" in the waistband and up to 1" through the seat. The entire circumference of the waistband is permanently set with two rows of red silicone beading to enhance a neat appearance by preventing shirt pull-out at the waist. After assembly the waistband is Ro-Cap™ set to the trouser. Grown on waistlines are not acceptable in lieu of trouser waistband as they add no strength or shape to the garment.

BELT LOOPS: There are seven belt loops on waist sizes 30" through 45", nine loops on waist sizes 46" and over, and five loops on sizes 28" and 29". Belt loops shall be set into the waistband at the top and bottom. Belt loops are fully 2 1/4" long and have a finished width of 3/4".

TAILORING AT HIPS: There are two darts to shape the trouser at the hips. They are placed at the left and right back extending down from the waistband to the center of each hip pocket

POCKETS: There are four pockets as follows:

FRONT: Left and right bi-swing type pockets with 6 1/2" quarter top openings and fully lined 1/4" depth. Openings are triangle bar-tacked reinforced at top inside waistband and at bottom across side seam. Pockets are also bar tacked twice at top of pocket bag under waistband, at corner of pocket bag, and at side seam. Pocket bags are reinforced by doubling pocket weight at the bottom of pocket bags. Pockets are constructed of internal construction fabric, not less than 2 1/2" deep.

REAR: Left and right bi-swing type hip pockets of top and bottom welt construction with openings 5 1/4" wide and 6" deep. Pocket openings shall be topstitch, reinforced openings and triangle bar tack reinforced at both ends for greater strength. Left pocket opening shall include # 22 ligné black four, with a button tab for closure

JEFFERSON PARISH FIRE DEPARTMENT STATION WEAR TROUSER

FLY CONSTRUCTION: The right inside fly is reinforced with internal construction fabric and 1/8" gauge topstitched along the entire exposed edge to insure shape retention for extended wear life. The left, outside fly is fully lined internally for shape retention on. Right and left fly are joined together at the base of the fly and this joint is reinforced through all layers of fabric with three bar tacks and an extended fly tail. The extended fly tail extends past the crotch seam by 1" for additional strength. The first bar tack is set horizontally. The second is set above the first and at a 45 degree angle. The third is set at a 45 degree angle in line with the first bar tack. The right inside fly is a true French Fly with secondary button closure for additional reinforcement and smooth appearance.

CROTCH AND SEAT ASSEMBLY METHOD: The crotch is formed below the fly at the intersection of the four foundation panels of the trouser: Left front, right front, left rear and right rear. Two triangular pieces (crotch lining) are sewn into the two front panels of the trousers to help absorb perspiration and increased strength to crotch seam. The trouser is assembled to form this crotch by first sewing the left front to the left rear thus making the left side of the trouser; and the right front to the right rear to form the right side. The left side of the trouser thus formed is then joined together to the right side by means of the seat seam. The trouser is not assembled by the alternate whole front to whole back method due to the unreliability of that method during extended wear life.

SEAT CONSTRUCTION: Extra fabric is allowed such that seat girth and waistband diameter may be expanded or decreased by the wearer during the trouser's extended wear life.

SILICONE CREASING: Permanent creases are applied by applying a row of silicone to the center front and center back of each pant leg.

FINISHING: All Poly/Cotton trousers shall be pressed and creased for a uniform appearance.

LABELING: All trousers will bear all labels mandated by the Federal Trade Commission at the date of manufacture.
