**Purpose of Form**

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

- Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
- Certify that you are not subject to backup withholding, or
- Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

**Definition of a U.S. person.** For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

**Special rules for partnerships.** Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

Specifications

Rapid Mixers East Bank Jefferson Parish Water Plant

1. A total quantity of 2 Rapid Mixers are required. Each basin is 141" wide, by 348" long with a side water depth of 162". Each mixer assembly shall consist of a heavy-duty gearbox, electric motor connected by a flexible coupling, baseplate, mixing shaft and mixing impeller. Hayward Gordon Model MBX (or equivalent) mixers.
2. The mixing impeller shall be of the pitch blade turbine flow design with a minimum impeller diameter of 78 inches and a maximum operating speed of 45 RPM. The impeller shall be constructed of 316 SS material with the blades bolted to the hub and with the hub fixed to the shaft with hook key and set screws for maximum security. An extended keyway shall be provided which will allow vertical adjustment of the impeller +/- 12" in 3" increments.

The maximum combined stress in any impeller component shall not exceed 11,000 psi under maximum operating loads. The shaft/impeller design shall be such that its operating speed shall not exceed 70% of its first lateral critical speed. Upon request, stress and critical speed calculations supporting shaft and impeller design are to be supplied with the submittal package.

3. The mixer gear reducer must be built in accordance with current AGMA standards. The reducer shall be a right angle design with horizontal input shaft and vertical output shaft. Speed reduction to be accomplished by use of a double reduction gearbox with high speed helical gearing and low speed spiral bevel gearing. The maximum ratio for any one gear set will be 6.2:1. Efficiency shall be no less than 98.5% efficiency per gear mesh. The housing shall be fabricated steel. The housing shall have an enlarged low speed bore to allow for assembly and adjustment of the low speed bevels without disturbing the high-speed gearing. Output of the mixers is to be 45 RPM

The housing shall have a removable high-speed end for easy ratio change and assembly/disassembly of the high-speed end without disturbing the low speed gearing. Each unit will be provided with an integral or separate baseplate suitable for mounting as shown on the drawings.

All gearing shall be lubricated by means of oil splash or immersion into the oil bath. The drive shall be equipped with a dipstick and/or an oil level sight glass to check the oil level. The drives must incorporate a drywell feature in the output area to eliminate the possibility of oil leakage down the shaft. Selected bearings may be grease lubricated provided they include a high quality seal to retain the grease.

The drive's minimum AGMA service factor, based on motor nameplate horsepower, will be 1.5. Upon request, documentation supporting gear ratings are to be supplied with the submittal package. Thermal ratings shall be calculated for continuous operation per AGMA standards based on a maximum sump temperature of 200°F and an ambient temperature of 100°F.

All drive bearings shall be of the antifriction type, ball or roller bearings. All bearings within the drive, including the output shaft bearings, shall have a minimum L-10 bearing life of 100,000 Hrs. when operating at full motor nameplate horsepower at the designed speed. Upon request, documentation supporting bearing life will be supplied with the submittal package.

Specifications

4. The mixing shaft shall be coupled to the gearbox output shaft by means of a rigid flanged coupling. Mating coupling faces shall have a male/female piloted connection for accurate concentricity and shall not require match marking for alignment.

The mixing shaft and coupling half shall be constructed of 316SS material. The shaft shall be designed such that the maximum combined stress does not exceed 9,000 psi under maximum operating loads. It shall be of overhung design – the use of underwater steady bearings is not permitted. Shaft straightness and rigid coupling squareness must be such that the maximum total indicated runout at the lower end of the shaft does not exceed 0.125" for every 10' of shafting, as measured when turning over by hand.

5. The electric motor shall be rated for continuous duty in a humid corrosive environment. Insulation shall be class F with a Class B temperature rise at 40o C ambient at 1.0 service factor. Service factor will be 1.15.

The motor shall be squirrel cage induction type for operation on 40 H.P.; 3 PH, 60 HZ, 460 V. Synchronous speeds shall be 1800 RPM TEFC. All motors shall be designed with applicable IEEE, NEMA, and ANSI standards.

Motors shall be connected to the reducer's input shaft with an easily accessible torsionally resilient flexible coupling protected by an OSHA coupling guard.

6. Upon installation, each unit shall be run to demonstrate its ability to operate without overloading, jamming or excessive vibration during normal operation.

Specifications

Rapid Mixers East Bank Jefferson Parish Water Plant

1. A total quantity of 2 Rapid Mixers are required. Each basin is 141" wide, by 348" long with a side water depth of 162". Each mixer assembly shall consist of a heavy-duty gearbox, electric motor connected by a flexible coupling, baseplate, mixing shaft and mixing impeller. Hayward Gordon Model MBX (or equivalent) mixers.
2. The mixing impeller shall be of the pitch blade turbine flow design with a minimum impeller diameter of 78 inches and a maximum operating speed of 45 RPM. The impeller shall be constructed of 316 SS material with the blades bolted to the hub and with the hub fixed to the shaft with hook key and set screws for maximum security. An extended keyway shall be provided which will allow vertical adjustment of the impeller +/- 12" in 3" increments.

The maximum combined stress in any impeller component shall not exceed 11,000 psi under maximum operating loads. The shaft/impeller design shall be such that its operating speed shall not exceed 70% of its first lateral critical speed. Upon request, stress and critical speed calculations supporting shaft and impeller design are to be supplied with the submittal package.

3. The mixer gear reducer must be built in accordance with current AGMA standards. The reducer shall be a right angle design with horizontal input shaft and vertical output shaft. Speed reduction to be accomplished by use of a double reduction gearbox with high speed helical gearing and low speed spiral bevel gearing. The maximum ratio for any one gear set will be 6.2:1. Efficiency shall be no less than 98.5% efficiency per gear mesh. The housing shall be fabricated steel. The housing shall have an enlarged low speed bore to allow for assembly and adjustment of the low speed bevels without disturbing the high-speed gearing. Output of the mixers is to be 45 RPM

The housing shall have a removable high-speed end for easy ratio change and assembly/disassembly of the high-speed end without disturbing the low speed gearing. Each unit will be provided with an integral or separate baseplate suitable for mounting as shown on the drawings.

All gearing shall be lubricated by means of oil splash or immersion into the oil bath. The drive shall be equipped with a dipstick and/or an oil level sight glass to check the oil level. The drives must incorporate a drywell feature in the output area to eliminate the possibility of oil leakage down the shaft. Selected bearings may be grease lubricated provided they include a high quality seal to retain the grease.

The drive's minimum AGMA service factor, based on motor nameplate horsepower, will be 1.5. Upon request, documentation supporting gear ratings are to be supplied with the submittal package. Thermal ratings shall be calculated for continuous operation per AGMA standards based on a maximum sump temperature of 200°F and an ambient temperature of 100°F.

All drive bearings shall be of the antifriction type, ball or roller bearings. All bearings within the drive, including the output shaft bearings, shall have a minimum L-10 bearing life of 100,000 Hrs. when operating at full motor nameplate horsepower at the designed speed. Upon request, documentation supporting bearing life will be supplied with the submittal package.

Specifications

4. The mixing shaft shall be coupled to the gearbox output shaft by means of a rigid flanged coupling. Mating coupling faces shall have a male/female piloted connection for accurate concentricity and shall not require match marking for alignment.

The mixing shaft and coupling half shall be constructed of 316SS material. The shaft shall be designed such that the maximum combined stress does not exceed 9,000 psi under maximum operating loads. It shall be of overhung design – the use of underwater steady bearings is not permitted. Shaft straightness and rigid coupling squareness must be such that the maximum total indicated runout at the lower end of the shaft does not exceed 0.125" for every 10' of shafting, as measured when turning over by hand.

5. The electric motor shall be rated for continuous duty in a humid corrosive environment. Insulation shall be class F with a Class B temperature rise at 40o C ambient at 1.0 service factor. Service factor will be 1.15.

The motor shall be squirrel cage induction type for operation on 40 H.P.; 3 PH, 60 HZ, 460 V. Synchronous speeds shall be 1800 RPM TEFC. All motors shall be designed with applicable IEEE, NEMA, and ANSI standards.

Motors shall be connected to the reducer's input shaft with an easily accessible torsionally resilient flexible coupling protected by an OSHA coupling guard.

6. Upon installation, each unit shall be run to demonstrate its ability to operate without overloading, jamming or excessive vibration during normal operation.
