However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Note. If the account is in more than one name, see the instructions for line 1 and the chart on page 4 for guidelines on whose number to enter.

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. - Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)

- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)

 - Form 1099-C (canceled debt)
 - Form 1099-A (acquisition or abandonment of secured property)
- Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding? on page 2.

By signing the filled-out form, you:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income, and

We do request a W-9 in our "Changes to Jefferson Parish Bidding Procedures" but it is not mandatory to be submitted with your bid. (but it is a good practice to send a copy each time, procedures may change at any time).

Ward Leonard is pleased to offer the following for said bid 50 – 00119334.

Our experience is that 95% of motors below 75HP are typically beyond economic repair (BER). We provided pricing for all motors above 75HP. Those motors below 75HP requiring repair even if BER can be priced on a T&M basis from supplied labor rate.

Included documents as part of this proposal:

2. Louisiana Uniform Public Work Bid Form; 1 page
3. Corporate Resolution Form; 3 pages
4. Bid Bond; 3 pages
5. Non-Public Works bid Affidavit; 3 pages
6. Certificate of Insurance; 4 page

Comments and Clarifications:

1. Ref. page 2, section 2: We can be onsite after request within 4 hours.
2. Ref. page 3, section 6: Completion times:
 - Recondition:
 - 1/2HP – 75HP (Not quoting these motor ratings)
 - 100HP and up 7-10 working days.
 - Rewind:
 - 1/2HP – 75HP (Not quoting these motor ratings)
 - 100HP and up 14 working days.
 - Form coil wound motors 15-20 working days.

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on Line 1 to avoid backup withholding. For individuals, this is your social security number (SSN). If you do not have a number, see *How to get a TIN* on page 3.

For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the Certification, but you must provide your correct TIN. General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

The person who gives Form W-9 to the partnership for purposes of establishing its U.S. status and avoiding withholding on its allocable share of net income from the partnership conducting a trade or business in the United States is in the following cases:

- The U.S. owner of a disregarded entity and not the entity,

STANDARD INSURANCE REQUIREMENTS – PUBLICLY ADVERTISED BIDS

All required insurance under this bid shall conform to Jefferson Parish Resolution No. 113646 or No. 113647, as applicable. Contractors may not commence any work under any ensuing contract unless and until all required insurance and associated evidentiary requirements thereto have been met, along with any additional specifications contained in the advertised bid. Except as where otherwise precluded by law, the Parish Attorney or his designee, with the concurrence of the Director of Risk Management or his designee, may agree on a case-by-case basis, to deviate from Jefferson Parish's standard insurance requirements, as provided in this Section. Vendors requesting deviation therefrom shall submit such requests in writing, along with compelling substantiation, to the Purchasing Department prior to the bid's due date. Any changes to the insurance requirements will be reflected in the bid specifications and addenda. Prior to contract execution and at all times thereafter during the term of such contract, contractors must provide and continuously maintain all coverages as required by the foregoing Resolutions, and the contract documents. Failure to do so shall be grounds for suspension, discontinuation or termination of the contract.

For bidding purposes, bidders must submit with bid submission a current (valid) insurance certificate evidencing the required coverages. Failure to comply will cause bid to be rejected. The current insurance certificate will be used for proof of insurance at time of evaluation. Thereafter, and prior to contract execution, the low bidder will be required to provide final insurance certificates to the Parish which shall name the Jefferson Parish, its Districts Departments and Agencies under the direction of the Parish President and the Parish Council as additional insureds regarding negligence by the contractor for the Commercial General Liability, Workmen's Compensation Insurance and the Comprehensive Automobile Liability policies. Additionally, said certificates should reflect the name of the Parish Department receiving goods and services and reference the respective Jefferson Parish bid number.

| | |
|--------------------|----------------|

Liquidated Damages will be assessed against the billing invoice in the amount of fifty dollars (\$50.00) per day for each and every working day beyond the repair completion times as listed above for unjustified delays in the completion on repairs.

7. OVERTIME

In the event of overtime, emergency, repairs are required, the contractor will be required 24 hours/day, seven days a week to repair the motor.

Overtime repair work shall be authorized in the event of severe weather conditions, threats to continuity of public utility service or other extraordinary circumstances as deemed necessary by Jefferson Parish. Under no circumstance shall the contractor assume overtime work without written authorization as indicated on the Electric Motor Repair Request Form, page 202, or verbal authorization by a representative of Jefferson Parish. This documentation shall be attached to the contractor's billing invoice for payment by Jefferson Parish.

Under the terms of this contract, subcontractor effort shall be limited to a maximum of thirty percent (30%) of total work performed. Additionally, all subcontract work shall be governed by all provisions of this contract.

Special circumstance: in the rare event that frame restacking becomes necessary as confirmed by the contractor, Jefferson Parish Inspector, and as evidenced by a core loss repair, then Jefferson Parish will direct the contractor to subcontract such restacking repair work to a third party invoice. Inspection requirements for frame restacking subcontractors will be the same as those required elsewhere in this specification.

9. ESTIMATE OF REPAIR

Under the terms of this contract, contractor shall provide a written estimate of repairs for all motors which are sent to him. These estimates will be used as an input to Jefferson Parish's financial management system as well as to determine the economic feasibility of repairing a particular motor. A copy of this Motor Repair Estimate is attached herein, page 203. If the decision not to repair the motor is made, Jefferson Parish reserves the option to retain motors deemed not repairable. If the motor is to be repaired, the contractor will be paid according to his base unit repairs price for rewind or recondition. Materials approved for payment are items such as bearings, seals, in-line splice kits, gaskets, heater strips, etc. Items which will not be allowed for payment are shop supplies common to many motors such as O- Rings, glue, tape, nuts, bolts, oil, etc. This contract is a labor intensive type contract, therefore, contractor's should consider all matters of labor and overhead and build his or her necessary profit into his or her prices for rewinding and reconditioning of motors.

All repair materials used to replace worn or damaged parts shall be new, i.e. not used, and be of equal or better quality as original parts.

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

Jefferson Parish reserves the right to supply repair materials to the contractor when it is deemed to be in the best interest of Jefferson Parish.

All worn and damaged parts, including bearings, which are replaced shall be tagged and returned with the repaired motor and also be listed on the billing invoice as having been returned. If the contractor does not return the replaced parts, including bearings, he will not be paid for the replacement parts.

Additionally, the contractor agrees to tag and store the crown of every rewind job in a suitable location on his or her premises for 13 months from date of the invoice and allow Jefferson Parish employees or their appointees' access to these crowns. After this time period has expired, the crowns become the property of the contractor.

18. MOTOR RECONDITIONING

General:

Motor reconditioning, see Section 24 for percentage of rewind prices, shall be performed in accordance with the relevant manufacturer's specifications and procedures for each and every motor unless otherwise specified. Reconditioning shall include but not necessarily be limited to disassembly, cleaning, mechanical and electrical inspection, varnish treating windings, baking, replace bearings if necessary, check balancing, check coupling, greasing, assembly, testing and painting.

In the case of UL listed motors, the contractor shall contact relevant department for instructions as to whether or not to repair the motor in accordance with UL procedures. Jefferson Parish will pay to the contractor all usual and customary UL charges for inspection services (Items 3410 – 3440).

Motor Preliminary Inspection and Testing:

Visually inspect all components, test stator for core loss, report stator damage and any core loss greater than 10 percent of original design.

The insulation resistance of all windings shall be measured and recorded as follows:

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

Use a 500 volt insulation resistance tester, megger for all 480 volt motors, and measure this insulation resistance turn to ground.

Rotor Reconditioning:

Steam clean, and dry by heating in oven.

If the rotor core laminations are found damaged, loose and/or shorted, they shall be repaired. Minor repair shall consist of separating the lamination and filling with mica and a class H varnish, etching, and hand filing. Major damage may require restacking of lamination. Hot spots shall be repaired. The hot spot temperature shall not be allowed to exceed 10 degrees Celsius above the average temperature.

Visually inspect for damage to air fans. If any exists, repair prior to varnishing the rotor.

Check rotor bars and resistance rings, for cage rotors, for open circuit by either a growler or a sonic test. Rotor bar movement, if minimal, shall be corrected by giving the rotor a bonding resin treatment and curing. Glass banding will also be considered for restricting bar movement.

At the conclusion of repairs, a dye penetrate shall be used over the short circuiting ring to inspect for cracked bars.

Additional repairs, if required, shall be done prior to the rotor being sprayed with a coat of an air drying varnish. If openings are found in an aluminum cast rotor, the rotor shall be replaced.

Collector rings shall be examined for pitting, roundness and burning. Perform repairs, if required, otherwise polish the rings by strapping. Do not use emery paper.

The end ring connections to the rotor bars must be of such quality that uniform resistance and continuity is maintained.

Stator Reconditioning:

The acceptable values for insulation resistance to ground are shown below:

| Motor Voltage in Volts AC | Test Voltage in Volts DC | Resistance (1 min.) in Megohms |
|---------------------------|--------------------------|--------------------------------|
| 480 | 500 | 15 |
| 2300 | 2500 | 25 |
| 4160 | 5000 | 50 |

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

If the megger readings obtained from the stator are higher than the above minimum values and the polarization index (P.I.) is greater than 2, Hi-Pot test the winding to ground at 0.6 (2E plus 1000) volts AC for one minute.

Note: whenever a stator alone is to be high-potted prior to assembling the motor, the test shall be done either with the end windings wrapped with aluminum foil and the foil grounded.

Perform a three phase balance test at about one-fifth rated voltage. Line currents should balance within 2-5 percent (depending on the motor size).

Steam clean to remove oil, grease, salt, and other unwanted deposits from windings. Do not pressure wash.

Dry the windings by heating it in an oven for 4-6 hours at about 200 degrees Fahrenheit. Visually inspect for signs of physical damage and/or deterioration to the winding, core lamination and other abnormalities. Inspect all machine and mating surfaces to make sure they are free of nicks, burrs, and all other foreign material.

Core lamination damage or shorts, if any exist, can be repaired either by etching, hand filing or separating lamination and filling the interspace with mica and a class H insulating varnish. Major damage may require restacking/replacing the lamination. A core test shall invariably be performed on all motors. A core loss in excess of ten percent shall be reported on the Motor Repair Estimate Sheet (page 203) and Motor Repair Data Sheet (page 201). Hot spot temperature shall not be allowed to exceed 10 degrees Celsius above the average core temperature.

All broken ties, blocks and wedges shall be replaced. The loose blocks and wedges shall be tightened using an approved adhesive with a filler material or replaced in kind.

Inspect and clean ventilation passages.

Inspect the terminal leads for damage.

Deterioration and/or burning. All leads shall be marked in accordance with NEMA standard and be G.E. Vulcanfler number 1 or equal. Leads shall be a minimum of one foot long of stranded copper cable and shall be sufficient durability to withstand moist environment.

Connectors shall be inspected for damage and/or burning signs. The damaged and/or burnt connectors shall be replaced with those having the following characteristics:

Suitable for either aluminum and/or copper cables

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

Suitable for compression filled with Penetrox in their barrels. Solder type connectors shall not be used.

Have two holes in the tongue area.

Have inside diameter of the barrel equal to outside diameter of the lead.

Nicks and burrs from the machined surfaces shall be removed by carefully filing them. All the rust shall be removed from the motor body either by sanding, using an approved solvent or strapping.

Heaters and their wiring shall be checked for proper insulation level (a few megohms at 500 volt megger), tight connections and open circuiting of the heaters. Repair if damage or deterioration is present.

After the above work has been completed, treat the motor with a coat of baking type H varnish or class H impregnating resin as manufactured by Epoxylite (Esterlite number 605) as outlined in Epoxylite's technical bulletin number 605 or approved equal.

Retest the insulation resistance to ground together with P.I. test for the minimum acceptable values as listed previously.

If satisfactory values are attainable, perform a hi-pot test on assembled motor for one minute at 0.6 (2E plus 1000) volt AC and record the leakage currents. The hi-pot test on the assembled motor is required to ascertain the insulation was not damaged during the assembly.

If there is no significant insulation resistance improvement and if the reading remains less than the minimum values then the stator shall be rewound (see Section 19).

19. MOTOR REWINDING

General:

Motor rewinding shall be performed in accordance with the relevant manufacturer's specifications and procedures for each and every motor unless otherwise specified. Rewinding shall include but not necessarily be limited to disassembly, cleaning, removal of old windings, mechanical and electrical inspection, rewinding with class H insulation, one dip and bake for 75 H.P. and smaller V.P.I. dip and bake for 100 H.P. and larger followed by a second dip and bake (including all form coil wound motors), machine work (if necessary) and other parts, greasing, new leads (included in rewinding price), assembly, testing and painting.

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

Nameplate: In the event of winding change, the original nameplate will remain on the motor and a new nameplate mounted adjacent to the original nameplate with the words REDESIGNED or CHANGED and then the new characteristics are to be stamped fully and completely on the new nameplate.

This new nameplate should also state the name of the company who originated or engineered the new characteristics.

In the event that a motor received by the contractor without a nameplate or with a nameplate with data which is not easily readable, then the contractor must replace said nameplate in accordance with the manufacturer's specifications and Bid Item 3400.

Nameplate data must reflect the motor characteristics as repaired, performed and delivered by the contractor and as reflected by the billing invoice and relevant documentation.

In the case of a UL listed motor, the contractor shall contact relevant department for instructions as to or not to repair the motor in accordance with UL procedures. Jefferson Parish will pay all usual and customary UL charges for inspection services. The existing winding shall be completely removed in such a manner that no damage is done to the laminations or frame and without impairing the magnetic characteristics of the core. No torches, chemical strippers, or burners that utilize a direct flame on the stator shall be used. Burning must be done in a temperature controlled oven capable of maintaining constant burning temperature at no more than 800 degrees Fahrenheit.

The crown of the winding shall be cut for every rewind job and be tagged and stored in a suitable location for the warranty period.

The interior, exterior, and all parts of the motor made of cast iron or steel shall be thoroughly cleaned and sandblasted to white metal prior to rewinding.

All materials used shall be new and of first grade quality. Conductor shall be of the same size as the original or an equivalent cross sectional area which will not increase the current density. Copper materials shall be the only materials used for rewinding and shall be Phelps Dodge Hapt or approved equal. Connections shall be silver brazed or copper welded. Dine leads may be high temperature soldered.

20. STATOR AND WOUND ROTOR REWINDING:

All winding data such as wire size, number of turns, throw of windings, connections, coil dimensions, end bell clearances and lead length etc. shall be recorded prior to stripping off the winding and such records shall be reported with the billing invoice.

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

The crown of the winding shall be cut for every rewind job and be tagged and stored in a suitable location for the warranty period.

The interior, exterior, and all parts of the motor made of cast Iron or steel shall be thoroughly cleaned and sandblasted to "white" metal prior to rewinding.

All materials used shall be new and of first grade quality. Conductor shall be of the same size as the original or an equivalent cross-sectional area which will not increase the current density. Copper materials shall be the only materials used for rewinding and shall be Phelps, Dodge, Hapt, or approved equal. Connections shall be silver brazed or copper welded. Fine leads may be high temperature soldered.

Old windings shall be roasted out of stator in an oven with adequate temperature controls to provide uniform heating and cooling to prevent warping and cracking of the frame and impairment of the magnetic quality of the core. The burn out shall be done by first maintaining at a temperature of 500 degrees F for 3-4 hours and then slowly increasing to a temperature of 700 degrees F maximum. The burnout temperature of 700 degrees F shall not be exceeded. Other stripping methods such as water blast or cold strip will be permitted when necessary.

After the winding has been removed from the roasted stator, the laminations will be thoroughly cleaned blowing out with compressed air and removing any remaining foreign matter by hand. The slots shall be clean and free of sharp edges or particles.

All old windings shall be removed and bore frame thoroughly cleaned using bead blast. Use only glass beads.

Laminations shall be inspected for damage. Repairs can be performed either by separating the laminations and filling the interspaces with mica and a class "H" insulation, etching or hand filing. Major damage may require restacking/replacing of the laminations.

The repaired stator shall be ring checked when core damage has occurred, and hot spots corrected.

A core test shall be performed on all motors 50 hp and above prior to rewinding. Hot spot temperature shall not be allowed to exceed 10 degrees C above the average core temperature.

Remove all rust by sanding using an approved solvent or scraping.

Inspect and clean all ventilation passages.

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

Spray the stator bore area with an air drying varnish.

Rewinding shall be done using copper wire coils designed for continuous duty. The copper size to be used shall conform to the motor manufacturer's latest specifications.

21. BALANCING, RUNNING VIBRATION AND MACHINE WORK

Electronic static and dynamic balancing and vibration testing shall be performed on all motors to assure acceptable vibration levels as specified hereafter. However, there will be no payment made for balancing and vibration testing under the terms of this contract.

Machine and welding work necessary to properly repair motors will be paid to the contractor on an hourly basis for actual work hours performed. The contractor shall quote hourly labor rates as listed in Bid Items 3410-3440. Work deemed by Jefferson parish to be excessive shall be justified in writing by the contractor prior to payment.

Each motor rotor shall be dynamically balanced on an appropriate balancing machine. The rotor balancing precision shall meet an assembled motor running vibration test noted in the next paragraph.

Complete motors shall be assembled and test run after repairs. The maximum measured vibrational velocity shall not exceed the following:

MAXIMUM PERMISSIBLE VELOCITY OF VIBRATION - INCHES PER SECOND

| MOTOR ON ELASTIC MOUNTING | MOTOR ON RIDGE MOUNTING | MOTOR SHAFT IN SLEEVE BRS. |

| 150-2000 HZ | .02 |

All vibration measurements will be made with an FFT (Fast Fourier Transform) analyzer utilizing 400 lines of resolution or greater and a frequency range of 0.4 x running speed of 2,000 hz. Each measurement will consist of 4 averages (linear,

SPECIFICATIONS AND PROPOSAL GUIDE FOR ELECTRIC MOTOR REPAIRS – BID #50-00119334

non-overlapping) using a hanning window. The transducer used during the test will be either a velocity transducer or accelerometer type transducer with a magnetic mount (hand-held pickups are not acceptable for measurement under this specification).

THE BALANCE FOR INTEGRAL HORSEPOWER MOTORS BUILT IN A 153 AND LARGER FRAME SHALL BE AS FOLLOWS:

| 1,000 - 1,499 | 0.002 |
| 999 AND BELOW | 0.0025 |

* For ac motors use the highest synchronous speed + amplitude as used in this paragraph means total peak to peak displacement.

All rotors and armatures must be centralized laterally on the shaft so as to eliminate end thrust pressure against either bearing and should float between bearings.

Total end play in sleeve bearing motors must be approximately 1/16" per inch diameter of shaft.

21. GENERATORS

All generators shall be repaired as motors based on their equivalent horsepower rating and are to be calculated according to the following formula:

Generator kw = kva x p.f (power factor)
Generator equivalent h.p. = kw x 1.34
