**HORACE SMALL®, SENTRY PLUS SPECIFICATION, Men's Trousers - Traditional Style
HS2148**

FABRIC

100% polyester. Two ply warp and filling, 10.5 - 11 oz. per linear yard, 2 x 1 gabardine weave, SolarBan Technology Fabric.

Color: Dark navy

DESIGN

Shall be made on a uniform pattern, having a plain front with quarter top pockets and two back pockets.

POCKETS

The front pocket opening will be a minimum 6 1/2" and be 6" deep from the bottom of the opening. They shall be stitched, turned, and restitched. The inside front pocket facing shall be a separate piece of self material finishing no less than 1 1/2" wide. The back pockets will have a minimum opening of 5 1/2" and be 6" deep. Sizes 29 and smaller will have a 5" opening. They shall be made with a Reese PW automatic machine and finished on the outside with an exposed top and bottom cord. The left pocket shall have a tab to button. The front pockets shall each have a straight bar tack and each back pocket shall be bar tacked with a triangular bar tacking machine.

POCKETING

All pocketing shall be black, 75% polyester/25% cotton with a minimum thread count of 80 x 58. The weight shall be 3.0 yds/lb.

WAISTBAND

The waistband shall be 2" wide and shall close with a crush-proof hook and eye, the eye being bar tacked for stability. Stretch Bar-Roll III waistband stiffener, 3/4" in width, shall be sewn into the top of the waistband to prevent rollover. The trousers are to be made with a continuous closed waistband. The waistband shall be set on and shall be stitched below the lower edge through the outer fabric and the waistband curtain.

The inner waistband shall be composed of a one-piece elastic web. This web shall contain a blend of 42% Nylon / 20% Polyester / 14% Neoprene Rubber (3 strands) / 6% Lycra / 18% Cotton. The elastic web shall be constructed so that the cotton content of the band is in the upper 1-1/8" portion where the pressure of the belt would require the wicking properties of cotton close to the body to maintain comfort. The remainder of the band will be woven with an open mesh construction to promote breathability in the hip area. Additionally, the web will have 35% stretch and be 3" wide. The web will be sewn at the top and at the bottom waistband seams which will reduce its stretch in the upper area to allow for a comfortable fit at the waist when bending or sitting. The upper portion of the web shall have a stiffness of .09 oz. of torque (as specified in FED STD-181, Method 6202) to prevent waistband rollover. The lower part of the web will be left free to stretch over the hips and give support to the back and abdomen. This lower high-stretch area will have pressure applied to it by the hips, preventing the trouser from slipping down while being worn. Three rows of exposed rubber woven into the center of the web will insure that the shirt remains tucked in for neat appearance.

INSIDE TRIM

The right fly and crotch linings shall be the same fabric and color as the waistband curtain. The right fly lining shall be sewn to the left fly below the zipper. The crotch lining shall be serged to each front. A separate French fly made of the outer fabric shall be sewn to the inside right fly.

BELT LOOPS

There shall be a minimum of five (5) belt loops on waist sizes 30 and down, seven (7) belt loops on waist sizes 31 - 48, and a minimum of nine (9) on sizes 50 and larger. Each loop is to be 3/4" wide, of double thickness, and stitched on the face side with a two needle machine. Except for the center back loop which shall be tacked on, all loops shall be sewn into the bottom of the waistband and into the rocap. They shall accommodate a 1-5/8" belt.

ZIPPER

The trousers shall be closed with a YKK brass zipper which has a brass bottom stop at the base of the zipper chain and a brass ratcheting cam lock slider. The inside left fly will be reinforced with Felton under the zipper stitching. A straight bar tack shall be sewn through from the outside of the garment to the inside at the bottom of the fly. It shall be sewn through the zipper tape, the right and left fly and the right fly lining. The right and left fly shall be joined by an additional bar tack located below the bottom zipper stop on the inside of the trouser.

STRIPE

There shall be a 1" Yellow gold 100% polyester # 8877Z stripe sewn on each leg starting at the bottom of the waistband extending down centered on the seam to the hem.

SEAMING

The entire trouser is to be seamed with polyester core thread. The seat seam shall be stitched with a tandem needle seat seaming machine. All exposed inside seams of the trouser are to be serged.

Trousers shall be labeled with the following information: style number, size, fiber content, care instructions, WPL number and country of origin.
