**Two (2) Year Contract for the Supply of Lube Oil Analysis for the  
Department of Drainage Pump Station Operations and All of  
Jefferson Parish Agencies and Municipalities**

---

**1.0 GENERAL**

1.1 These specifications describe, (1) the lube oil trend analysis required to set preventative maintenance operation of the drainage and water district's engines and other oil lubricated machinery; (2) to check quality of new stock lube oil; (3) to check the quality of new purchased fuel oil; (4) to check the quality of existing fuel oil stocks. Oil analysis shall run for an annual period in accordance with the specifications and requirements prepared for the department of public works.

1.2 The bidder is requested to quote a unit price for each specific type of oil sample analysis to be performed.

1.3 This contract shall be for two years starting upon the date of execution of this contract.

1.4 Samples shall be collected by parish personnel in bottles provided by the contractor.

1.5 The bid price shall include all costs for providing and reporting the required laboratory analytical services, including the furnishings of all sample bottles, labels, and pre-addressed mailing containers for shipment of batches of the samples to an out of town laboratory (if applicable.)

1.6 The parish will bear the cost of hand delivering the samples to a local address within the New Orleans metropolitan area, and said address shall be either the laboratory's place of business; or a designated local express delivery firm (in the event of an out of town laboratory). All costs of further transportation and delivery of the samples, and thereafter delivering the written results of the analysis back to the parish at 1221 Elmwood Park Blvd., suite 907, shall be included in the unit bid price.

1.7 The contractor will provide a pre-printed label for the samples of oil from existing engines, gears, and bearings which will contain the following information:

Sender's name: **Jefferson Parish Drainage**  
 Unit location:  
 Unit identification:  
 Make/Type:  
 Sample data:  
 Type of lube oil:  
 Hour since change:  
 Oil product name and number:

- 1.8 The pre-printed label provided by the contractor for new stock lube oil will contain the following information:

Sender's name: **Jefferson Parish Drainage**  
Stock location  
Type of lube oil  
Product name and number

- 1.9 The pre-printed label provided by the contractor for new fuel oil for stock or for existing fuel in storage will contain the following information:

Sender's name: **Jefferson Parish Drainage**  
Fuel stock location  
Type of fuel oil

- 1.10 All items will be awarded to single bidder.

- 1.11 **Bidder shall submit with bid submission a sample typical report sheet for each type of analysis requested, indicating the elements analyzed by spectrochemical methods, physical properties, operating data (such as unit run hours, hours since oil change, oil added, etc.), identification data maintenance recommendations etc. The sample sheet shall also provide for printout of the results of at minimum the last five samples for the particular unit in question.**

**Failure to submit the "required information" listed in previous paragraph (1.11) will result in bid deemed non-responsive and rejected.**

- 1.12 **Bidder shall submit with bid submission the detailed information of the test procedures, method/means of transporting samples, testing equipment, and test facilities - all as necessary for the parish to determine the ability of the bidder to perform the work requested.**

**Failure to submit the "required information" listed in previous paragraph (1.12) will result in bid deemed non-responsive and rejected.**

- 1.13 Upon the basis of a normal batch of up to thirty (30) samples delivered in accordance with paragraph 1.5, to the laboratory, or his agent, or his express delivery firm, the parish must receive, at its office, 1221 Elmwood Park Blvd., suite 907, the written results of the analysis of the thirty (30) sample batch within 120 hours (5 days). If Drainage Department deems testing an emergency, a batch of two (2) samples, also delivered in accordance with paragraph 1.5, to the laboratory, or his agent, or his express delivery firm, the parish must receive, at its office, 1221 Elmwood Park Blvd., suite 907, the written results of the analysis of the two (2) samples within 18 hours.

- 1.14 The stated quantity of test reports is approximate and for comparison of bids only, and the parish reserves the right to either increase or decrease the amount of work at its sole discretion.
- 1.15 A listing of the various engines, gears, and other machinery, for which oil testing is desired is available for bidder review. However, it is to be observed that additions are periodically made thereto, as projects under construction are made operational. Various other older units will be de-commissioned. Therefore, the listings are not static, and constant change is to be envisioned. An average of 95 oil samples are sent out each month for analysis. See **ATTACHMENT A** for list of engines, gears, and other machinery.
- 1.16 The contractor and the parish shall meet shortly after award in order to coordinate and schedule sample intervals, sample collection, identifications, provision of an adequate supply of sample bottles and shipping containers, reporting procedures, billing procedures, and similar details. Thereafter, the contractor shall meet with parish staff on a quarterly basis to discuss general results and interpretations thereof. It is to be understood that such costs incurred by the contractor shall be included in the unit bid price for the various items of work.

## **2.0 Technical Information, Lube Oil Analysis:**

### **2.1 General:**

The purpose of this program is to provide periodic reports and recommendations, as yielded by spectrochemical analysis and physical property tests done upon lube oil samples, as will allow determination of the condition of the lubricant, as well as allow indication information as to the physical condition of the machinery (and components thereof). The results of individual tests, when compared against previous tests, all for the same batch of lubricant in the same machines, allows the determination of trends and patterns as are of value in maintenance. All testing shall be done in accordance to ASTM standards. For results to be meaningful, it is important for sampling technique to be such as to yield representative samples, particularly when dealing with samples that may contain suspended solids or liquids. In general, samples will be taken immediately after appropriate circulation of the lubricant.

### **2.2 Spectrochemical analysis:**

The presence of various metallic elements such as iron, lead, copper chromium, aluminum, tin, antimony, and silver indicate the wear of metal components of machinery such as pistons, engine liners, bearings, and gearing.

The presence of silicon indicates contamination of the lubricant by air borne dust and dirt, and thus the effectiveness of air intake cleaning components.

The presence of boron and sodium indicate coolant system leakage as compounds of these elements are used as additives to coolants for corrosion protection.

Molybdenum, phosphorus, zinc, calcium, barium, magnesium, and silicon are elements commonly blended into various lubricants as additives for specific

functions such as anti-wear characteristics, detergents, and dispersants, and their presence can identify the lubricant and its suitability for the application.

**2.3 Physical Properties:**

The physical property tests such as tests for fuel dilution, total solids, water, viscosity, viscosity index, flash point, four point sulphated ash, t.a.n., t.b.n., are of value to indicate the type of lubricant, its suitability for usage in specific machinery, and possible contamination.

2.4 The number of elements to be checked by spectrochemical analysis shall be twenty (20). The exact elements shall be subject to change (subject to mutual agreement) in the case of those elements the determination of which is of marginal value in diagnosing potential problems.

2.5 The laboratory shall also report its recommendation relating to continued use of the oil product, and the possibility of coolant, fuel or air system problems.

**3.0 Technical Information, Fuel Oil Analysis:**

3.1 The purposes of the analysis of fuel oils in stock is to determine the adequacy of said fuels for use in various engines and/or to determine the compliance of said fuels with various purchase specifications.

3.2 Fuel oil testing shall be done by broadly accepted analytic methods as will yield the following:

- (1) Api gravity
- (2) Distillation test results to indicate the boiling point and other percentage distillation points, thus yielding "cetane index".
- (3) Sulphur content.
- (4) Centrifuge test results to yield information on water content and other sediment.
- (5) Appearance

After consultation, the Parish Attorney's Office will then respond to protests in writing. (For more information, please see Chapter 2, Article VII, Division 2, Sec. 2-914.1 of the Jefferson Parish Code of Ordinances.)

"LSA – R.S. 38:2251-2261"

**B. USE OF BRAND NAMES AND STOCK NUMBERS:** Where brand names and stock numbers are specified, it is for the purpose of establishing certain minimum standards of quality. The price quoted for work shall be stated in figures. In the event there is a difference in unit prices and totals, the unit price shall prevail.

Quantities listed are for bidding purposes only. Actual requirements may be more or less than quantities listed.

Bidders are not to exclude from participation in, deny the benefits of, or subject to discrimination under any program or activity, any person in the United States on the grounds of race, color, national origin, or sex; nor discriminate on the basis of age under the Age Discrimination Act of 1975, or with respect to an otherwise qualified handicapped individual as provided in Section 504 of the Rehabilitation Act of 1973, or on the basis of religion, except that any exemption from such prohibition against discrimination on the basis of religion as provided in the Civil Rights Act of 1964, or Title VI and VII of the Act of April 11, 1968, shall also apply. This assurance includes compliance with the administrative requirements of the Revenue Sharing final handicapped discrimination provisions contained in Section 51.55 (c), (d), (e), and (k)(5) of the Regulations. New construction or renovation projects must comply with Section 504 of the 1973 Rehabilitation Act, as amended, in accordance with the American National Standard Institute's specifications (ANSI A17.1-1961).

Jefferson Parish and its partners as the recipients of federal funds are fully committed to awarding a contract(s) to firm(s) that will provide high quality services and that are dedicated to diversity and to containing costs. Thus, Jefferson Parish strongly encourages the involvement of minority and/or woman-owned business enterprises (DBE's, including MBE's, WBE's and SBE's) to stimulate participation in procurement and assistance programs.
