

All Public Work Projects are required to use the Louisiana Uniform Public Work Bid Form

All prices must be held firm unless an escalation provision is requested in this bid. Jefferson Parish will allow one escalation during the term of the contract, which may not exceed the U.S. Bureau of Labor Statistics National Index for all Urban Consumers, unadjusted 12 month figure. The most recently published figure issued at the time an adjustment is requested will be used. A request must be made in writing by the vendor, and the escalation will only be applied to purchases made after the request is made.

Are you requesting an escalation provision?

YES _____ NO X

MAXIMUM ESCALATION PERCENTAGE REQUESTED _____ %

INITIAL BID PRICES WILL REMAIN FIRM THROUGH THE DATE OF _____.

For the purposes of comparison of bids when an escalation provision is requested, Jefferson Parish will apply the maximum escalation percentage quoted by the bidder to the period to which it is applied in the bid. The initial price and the escalation will be used to calculate the total bid price. It will be assumed, for comparison of prices only, that an equal amount of material or labor is purchased each month throughout the entire contract.

4.4 Quality and appearance:

4.4.1 The finished casting shall show careful finished workmanship in all particulars. Castings which have been damaged either during manufacture or shipping may be rejected. Among others the following defects may be considered as constituting poor workmanship:

4.4.1.1 Defects: major (items that may affect casting load bearing ability) casting could be rejected or required proof that defect is not injurious. Example of such defects include: shrink, cracks, cold shuts, large cavities, major porosity episodes or major sand inclusions

4.4.1.2 Defects: minor (items that may affect top surface appearance) casting could be reworked and resubmitted. Examples of such defects include: dirt, scab, slag, minor surface porosity or minor sand inclusions

5.0 **Proof Loading Testing:**

5.1 The first article inspection or when specified for quality conformance inspection, the frames and covers or grating shall show no detrimental permanent deformation when a proof load of 178 KN (40,000 lb.) is concentrated on a 229 mm (9 in.) X 9 in.) Area placed at the center of the cover or grate. The specified load shall be applied and held for a period of 1 minute by a suitable testing machine. Upon removal of the load, the cover and grating or frame shall be examined for cracks or detrimental permanent deformation. Permanent deformation shall not exceed 3.2 mm (1/8 in.). Any cracks shall be cause for rejection. All testing shall occur in the United States on a testing machine calibrated in accordance with and traceable to national institute of standards and technology (NIST) standards. All castings that are subjected to the proof load test shall be destroyed.

5.2 The 178 KN (40,000 lb.) Proof requirement listed in section 5.1 represents a safety factor of 2.5 for h-20 or hs-20 loading. A 222 KN (50,000 lb.) Proof load should be used in section 5.1 which represents a safety factor of 2.5 for h-25 or hs-25 loading.

5.3 Precision and bias: no statement is made about the precision or the bias for the proof lead test method described in section 5.1 for measuring the ultimate strength of the casting. The result merely states if there is conformance to the criteria for success specified in the procedure outlined in section 5.1

6.0 **Material Testing:**

6.1 Test bar testing shall be conducted in accordance with the applicable

inspection requirements of section 7. Test bar preparation and tensile testing shall be in accordance with the applicable material specifications listed in section 3. Failure to meet the material specification shall be cause for rejection.

7.0 Inspection:

7.1 Unless otherwise specified in the contract or purchase order, the manufactures shall be responsible for carrying out all the test and inspections required by this specification, using purchaser approved reliable facilities, and shall maintain complete records of all such test and inspections. Such records shall be available for review by the purchaser. Three separate and alternative basis of acceptance are permitted. The producing foundry is located in the United States of America, and operates in accordance with an acceptable quality system approved by the purchaser, all castings must adhere to the inspection criteria listed in section 7.1.1 and 7.1.2. If the producing foundry is not located in the United States of America and it is not operating in accordance with an acceptable quality system approved by the purchaser, all castings must adhere to the inspection criteria listed in sections 7.1.1 and 7.1.3.

7.1.1 Acceptance on the basis of proof of load test. Acceptability if the castings produced in accordance with the specification shall be determined by the result of the proof load test as listed in sections 5.1 and 5.2. The producing foundry shall provide information about the ultimate strength of the castings to the purchaser upon request.

7.1.2 Acceptance on: the basis of separately cast test bar before supplying any castings to purchaser the supplier/manufacturer must first submit to the purchaser for acceptance, documentation that a quality system is in place to ensure material compliance. Thereafter, acceptability of the castings produced in accordance with this specification shall be by certification of the results of material test conducted on separately cast test bars, and by inspection of the finished castings for freedom from defects. The supplier/manufacturer shall provide certification that the test bars furnished for testing represent the castings furnished for the order. If there are more than three test bar failures in one calendar year, the producing facility shall immediately report the three failing test results to the purchaser and shall discontinue supplying product. In order for the producing foundry to resume supplying product, documentation that a new quality system is in place to ensure material compliance must be submitted to and accepted by the purchaser. The purchaser shall also have the option of allowing production under section 7.1.3.

7.1.3 Acceptance on the basis of cast-on test bars:
A test bar for determining the class of iron shall be cast on each member at a place where it can be easily broken off with a

breakage pattern remaining on the member. Test bars are only to be removed after receipt or permission from the purchaser. Test bars shall be of sufficient size to produce a machined test specimen complying with the dimensional requirements for a type b test bar as shown in table 2 of AASHTO M 106. For lots of 15 or less, 30 percent of the bars selected at random from castings shall be tested by the supplier/manufacturer. For lots of 16 to 100, 10 percent or a minimum of 5 test bars selected at random from castings shall be tested by the supplier/manufacturer. For lots greater than 100, a minimum of 10 percent of all test bars selected at random from castings shall be tested by the supplier/manufacturer. All test bars shall conform to the strength specified. If any of those test bars fail to conform to the strength requirements herein specified because of surface or internal defects, additional testing shall be performed at the direction of the purchaser. For lots 15 or less, all remaining test bars must be tested. For larger lots, an additional 10 or ten percent, whichever is greater, of the remaining test bars selected at random from the entire lot must be tested. All test results from this additional testing must conform to the strength requirements of this specification for the lot of castings to be acceptable. Each casting that has a test bar removed from it and evaluated must be inspected for mass (weight) and dimensions by the supplier and manufacturer. If the casting does not conform to the mass (weight) or dimensional requirements, all remaining castings shall be inspected and all must conform to the requirements for the lot of castings to be acceptable. If the purchaser elects to select a casting for verification of test results, the member shall be furnished by the supplier at no cost to the purchaser. All test specimen preparation and testing shall be paid by the supplier.
