Controls Inc. releases new Pump Control

Using technological advances in today's advanced micro processors, Controls Inc. is transforming the pumping world with the simplest, most configurable pump control panels on the market. The CX display drives the panel's extensive I/O and allows the most sophisticated, multi-ECU controlled engines to be tamed using proprietary methodology.

Whether you are looking to dewater a job site, transfer water across miles of terrain, or run a bypass and filtration job, the 83501 panel will make your operation a success. Each display has all the tools you will need to easily match the performance to the job required.

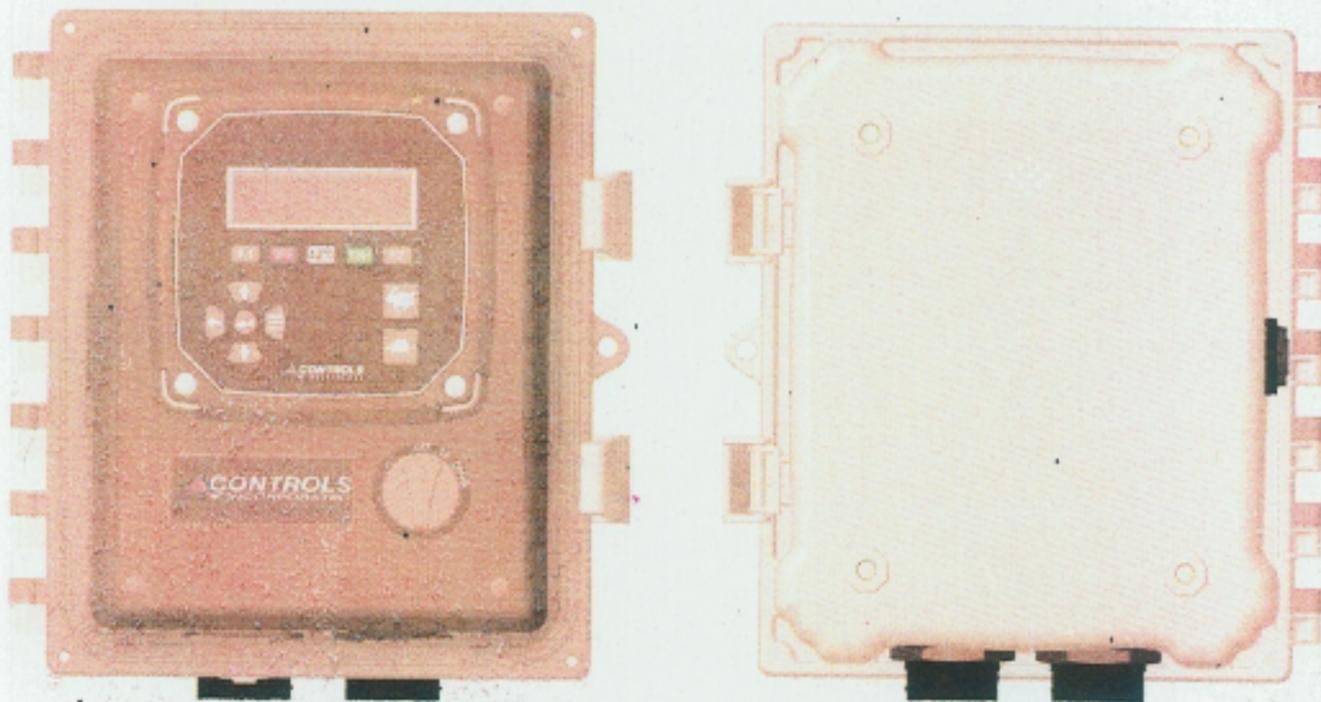

Knowing what is happening in the pump end is the key to success. The CX-83501-AS panel is equipped to monitor the inlet and outlet pressures and flow rate. Sump level can also be monitored and used to control the operation of the pump. Engine starting, stopping and speed control can be automated using a single or dual transducer configuration. Of course, single and dual floats can also be used in traditional settings with simple Drain and Fill mode selection.

Telemetry Ready

Each panel is equipped with a 4G/LTE plug ready connect you to your equipment. Know exactly when, where and how your equipment is being used. Perfect for remote trouble shooting and operation.
