**BID FORM**  
Non Public Works

All Public Work Projects are required to use the Louisiana Uniform Public Work Bid Form

All prices must be held firm unless an escalation provision is requested in this bid. Jefferson Parish will allow one escalation during the term of the contract, which may not exceed the U.S. Bureau of Labor Statistics National Index for all Urban Consumers, unadjusted 12 month figure. The most recently published figure issued at the time an adjustment is requested will be used. A request must be made in writing by the vendor, and the escalation will only be applied to purchases made after the request is made.

Are you requesting an escalation provision?

YES \_\_\_\_\_ NO ☒

MAXIMUM ESCALATION PERCENTAGE REQUESTED \_\_\_\_\_ %

INITIAL BID PRICES WILL REMAIN FIRM THROUGH THE DATE OF 10/12/19

For the purposes of comparison of bids when an escalation provision is requested, Jefferson Parish will apply the maximum escalation percentage quoted by the bidder to the period to which it is applied in the bid. The initial price and the escalation will be used to calculate the total bid price. It will be assumed, for comparison of prices only, that an equal amount of material or labor is purchased each month throughout the entire contract.

Available in Wheeled and Stationary Extinguishers

ABC or Multi-Purpose extinguishers utilize a specially fluidized and siliconized mono ammonium phosphate dry chemical. It chemically insulates Class A fires by melting at approximately 350°F and coats surface to which it is applied. It smothers and breaks the chain reaction of Class B fires and will not conduct electricity back to the operator.

Additional Information

If you own more than one trailer, you know what a hassle it can be switching back and forth between ball mounts and keeping track of which ball mount fits which coupler. CURT has made things simpler with the multi-tow ball mount. These ball mounts feature two or three trailer balls mounted onto a straight shank to accommodate various coupler sizes and loads.

This multi-ball ball mount features a 1 7/8", a 2" and a 2 5/16" ball. The 1 7/8" trailer ball can tow up 5,000 lbs. of gross trailer weight and 500 lbs. of tongue weight. ## Installation Instructions Back-up Alarm

### General Information:

Congratulations! You have purchased the finest back-up alarm product available on the market today. Back-up alarms are designed to provide a warning sound in hazardous environments associated with vehicles or mobile equipment. To realize this products' full value, it must be installed in conformance with the instructions provided in this guide. Install an alarm that will be audible on the noisiest job site on which the vehicle will be used. Ground guidance should be provided to the driver when backing a vehicle in a job environment where the audibility of the alarm is in question.

**Failure to install this back-up alarm in accordance with manufacturer's recommendations for installation may result in property damage, serious injury, and/or death to those you are seeking to protect !!!**

Selection and installation of an alarm should meet the requirements of SAE J1446 (May.89) "On-Machine Alarm Test & Evaluation Procedure for Construction & General Purpose Industrial Machinery", and all applicable codes. Operation of a vehicle in noisy environments may require an alarm that is louder than indicated in SAE J1446 (May.89). Install an alarm that will be audible on the noisiest job site on which the vehicle will be used. Ground guidance should be provided to the driver when backing a vehicle in a job environment where the audibility of the alarm is in question.

Back-up alarms are intended for commercial use. Proper installation of a back-up alarm requires a good understanding of truck and heavy equipment electrical systems and procedures, along with proficiency in the installation and use of safety warning equipment.

When installing an alarm product, be sure to verify that both sides of the mounting surface are clear of anything that could be damaged.

Place the back-up alarm so it will operate properly under adverse conditions. The location must provide protection from impact and poor weather conditions while allowing unobstructed sound projection to the target hazard area.

The back-up alarm system must be inspected each work day at the beginning of each shift to ensure that it is audible, operating properly, and securely attached to the vehicle. Inspect more often when: 1) The vehicle is operating in an adverse environment; 2) The vehicle is operating in foul weather conditions; 3) The operator has reason to believe the alarm has been damaged or is not working properly; and/or 4) Increased background noise interferes with the ability of workers to recognize when the alarm is sounding.

**Note:** Back-up alarms should be used for BACK-UP WARNING applications only. The back-up alarm sound is generally recognized as a warning for reversing vehicles/mobile equipment. Alarm products with different sound tones are available for non-reversing applications.

### Installation Instructions & Sound Level:

This product is designed to concentrate its audible alarm in the target hazard area. **NOTE:** This product is a safety device. It must be connected to the vehicle's fused back-up lamp circuit or its own separate fused power point to assure its continued operation. For proper sound dispersion, it must be mounted approximately 4 feet above ground level with the sound opening facing the target hazard area (see SMART-ALARMS below). The label on each alarm describes the sound output level in decibels (dB).

1. Select a mounting location at the rear of the vehicle that will provide protection from flying objects, debris, and foul weather conditions while allowing unobstructed sound projection from the vehicle.
2. Using the alarm's housing as a template, mark location for the mounting holes. Drill holes at location marks.
3. Secure alarm on the vehicle.
4. This unit requires a reliable power and ground connection for operation. Complete the wiring according to the wiring diagram shown in figure 1. Use 18 gauge wire (minimum) and observe correct polarity. **WARNING!!** Anytime the Backup Alarm is in operation, continuity must be maintained between the positive voltage of the power source and the positive terminal (+) of the Backup Alarm as well as between the negative terminal (-) of the Backup Alarm and the common ground (the machine member to which all wire grounds are connected). During operation the voltage differential between the positive voltage of the power source and the positive terminal (+) of the Backup Alarm shall not exceed 150mV. During operation the voltage differential between the common ground and the negative terminal (-) of the Backup Alarm shall not exceed 150mV. Route wire in a protected manner in accordance with vehicle manufacturer recommendations. **NOTE:** The back-up alarm is sensitive to polarity and will not operate when its power connections are reversed unless the product is a manually adjustable alarm (see below).

**Important!!** DO NOT wire in parallel with a solenoid or relay coil. DO NOT spray any coating material, e.g. paint, undercoatings, etc., over the sound opening. DO NOT install the alarm or its wiring in proximity to ignition wires. Failure to observe these conditions may have an adverse effect on the alarm's performance.

Figure 1

5. Test the alarm for proper operation. If alarm does not sound, review step 4. After confirming proper operation, affix the provided Warning Label to the dash board of the vehicle in plain view of the operator. **Do not operate this vehicle if the back-up alarm is not functioning properly.**
6. Add requirement to "test back-up alarm system before operating vehicle" to the daily maintenance log and notify your supervisor or team leader that people operating this vehicle **MUST** confirm proper alarm operation at the beginning of each work shift. **Do not operate this vehicle if the back-up alarm is not functioning properly.**

SMART-ALARMS have a self-adjusting feature which automatically changes their sound output level to be a minimum of five (5) db(A) above the surrounding noise levels within a range of outputs. This sound output adjustment diminishes as surrounding noise levels approach the maximum output of the alarm. **Note:** SMART-ALARMS must not be confined in internal compartments or enclosed spaces where echo effects may interfere with the self-adjusting volume mechanism. If this occurs the alarm will automatically adjust to its highest sound output level.

MANUALLY ADJUSTABLE ALARMS provide two (2) sound output levels. To produce the high sound output, connect the red wire with the black trace (power wire) to the positive (+) lead and connect the black wire (ground wire) to the negative (-) lead or ground. To produce the low sound output, connect the red wire with the black trace (power wire) to the negative (-) lead or ground and the black wire (ground wire) to the positive (+) lead.

NON-ADJUSTABLE ALARMS have a fixed sound output level. Observe correct polarity.

### **Specifications:**

This alarm conforms to the operating specifications detailed in SAE J994 (Aug.93) and SAE J1211 (Nov.78). A listing of product specifications is available upon request.

### **Vehicle Operations:**

As the operator of a vehicle, you should always know when the alarm is sounding and when it is not sounding. Should the alarm become inoperative, discontinue vehicle operation and notify your supervisor or team leader. Operating a vehicle with an alarm that is not functioning properly could endanger the lives and/or property of those who depend on the alarm signal for safety.

Back-up alarm testing must be itemized on the daily maintenance log. An alarm on an operating vehicle must be tested prior to the vehicle's use at the beginning of each work shift. Check the daily maintenance log to confirm acceptable results of this testing before operating the vehicle/mobile equipment.

- More frequent testing may be necessary if the vehicle is operating in adverse conditions.
- Ground guidance should be provided to the driver when backing a vehicle in a job environment where the audibility of the alarm is in question.

### **Maintenance:**

Preventive maintenance procedures must specify an alarm safety system inspection. This check should include a thorough examination of the electrical connections and the sound opening. The sound opening must be kept clear of dust, mud, or any other foreign material that may prevent the alarm from sounding properly. Should this inspection reveal an alarm that is not functioning properly, place a "Do Not Use" sign on the equipment and notify your supervisor or team leader.

# KNAACK LLC LIMITED LIFETIME WARRANTY FOR WEATHER GUARD® PRODUCTS

## WEATHER GUARD® Products – Limited Lifetime Warranty

(Purchased on or after 1/1/2009)

KNAACK LLC (the "Manufacturer") warrants to the original purchaser only that WEATHER GUARD® Truck and Van Products (the "WEATHER GUARD® Product") will be free from defects in material and workmanship from the date of purchase and continuing for the expected lifetime of the WEATHER GUARD® Product. A copy of the original sales receipt must be supplied to the Manufacturer at the time a warranty claim is made. This warranty terminates if the original purchaser transfers the WEATHER GUARD® Product to any other person.

### What is Covered

All WEATHER GUARD® Products identified above that are purchased on or after January 1, 2009.

### What We Will Do To Correct Problems

Subject to the limitations and exclusions described in this limited warranty, the Manufacturer will remedy defects in materials or workmanship by providing one of the following remedies at its option and without charge to the original purchaser for parts or labor: (a) repairing the defective portion of the WEATHER GUARD® Product or (b) replacing the entire WEATHER GUARD® Product. In addition, the Manufacturer may elect at its option, not to repair or replace the WEATHER GUARD® Product, but rather issue to the original purchaser a refund equal to the purchase price paid for the WEATHER GUARD® Product or a credit to be used toward the purchase of a new WEATHER GUARD® Product.

### What is Not Covered

This limited warranty expressly excludes:

- Defects caused by normal wear and tear, cosmetic rust, scratches, accidents, unlawful vehicle operation, or modification to the product, or any types or repair of a WEATHER GUARD® Product other than those authorized or provided by the Manufacturer.
- Defects resulting from conditions beyond the Manufacturer's control including, but not limited to misuse, overloading, or failure to assemble, mount or use the WEATHER GUARD® Product in accordance with the Manufacturer's written instructions or guidelines included with the WEATHER GUARD® Product or made available to the original purchaser.
- Damage to the contents of the box or vehicle.
- TO THE EXTENT PERMITTED BY LAW, IN NO EVENT SHALL THE MANUFACTURER BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, INCLUDING ANY ECONOMIC LOSS, WHETHER RESULTING FROM NONPERFORMANCE, USE, MISUSE OR INABILITY TO USE THE WEATHER GUARD® PRODUCT OR THE MANUFACTURER'S NEGLIGENCE.

### No Other Express Warranty Applies

This Limited Lifetime Warranty is the sole and exclusive warranty for WEATHER GUARD® Products. No employee, agent, dealer, or other person is authorized to alter this warranty or make any other warranty on behalf of KNAACK LLC.

### Notification Procedures

If the WEATHER GUARD® Product does not conform with the terms of this limited warranty, the original owner must promptly notify the Manufacturer in writing upon discovery of the nonconformity. In order to receive the remedies under this limited warranty, the warranty claim must describe the nature of the nonconformity, and a copy of the original sales receipt, invoice, bill or other proof of purchase must accompany the claim. Repairs or modifications made to the WEATHER GUARD® Product by other than the Manufacturer or its authorized agent will nullify this limited warranty. Coverage under this limited warranty is conditioned at all times upon the owner's compliance with these required notification and repair procedures. Warranty claims must include reciprocal contact information and may be made via certified mail to:
