SC315-G

RECTANGULAR RAPID FLASHING BEACON

carmanah
Traffic

MUTCD-compliant, pedestrian-activated warning beacon for uncontrolled marked crosswalks

- Improve pedestrian safety by increasing driver yield rates
- Passive activation: microwave-based sensor detects pedestrian
- Audible push button station
- Solar power performance even in partially shaded applications
- Solar and AC-powered models wirelessly communicate and can be used together in the same application
- Meets and exceeds MUTCD requirements, including IA-21

RRFBs have been found to provide vehicle yielding rates between 72 and 86 percent for crosswalk applications, including 4 lane roadways with average daily traffic (ADT) exceeding 12,000*.

Superior Design and Technology

The SC315-G is a cabinet-based system with a separate, high-power solar panel. This design enables the SC315-G to work with audible push button stations, passive activation sensors, and remote monitoring, as well as operate at higher intensities and increased activations in challenging environments. MUTCD interim approval IA-21 flash pattern and multiple configurations enable the SC315-G to handle all crosswalk applications.

Easy Installation

All components, including the battery or AC power supply, Energy Management System (EMS) and optional audible push button controller are housed in a compact, lockable, purpose-built enclosure. It also incorporates a wire routing and termination system, and all components are wired at the factory for an efficient installation.

Advanced User Interface

The SC315-G comes with an on-board user interface for quick configuration and status monitoring. It allows for simple in-the-field adjustment of flash pattern, duration, intensity, ambient auto adjust, night dimming, and many more. Settings are automatically sent wirelessly to all units in the system.

Compatibility

Compatible with Carmanah RRFBs and the R820-E, R820-F, and R820-G circular beacons. Interchange solar and AC power models within the same application.

Trusted

With thousands of installations, Carmanah's beacons are the benchmark in traffic applications and other transportation applications worldwide.

INTRODUCTION

WHAT IS THE CROSSTALK CROSSWALK

The CrossTalk CrossWalk is an Advanced, Solar-Powered Lighting Controller. Designed for multiple applications, CrossTalk CrossWalk controller is used for a variety of traffic & safety applications including school zone safety systems, crosswalk/pedestrian systems, speed/radar systems and more. Utilizing solar power and short-range wireless connectivity, CrossTalk CrossWalk applications can be setup quickly and provide more functionality and flexibility than traditional "wired" systems.

The CrossTalk CrossWalk device is a rugged, integrated unit which provides a built-in solar controller with Maximum Power-Point Tracking (MPPT), battery management with low-voltage disconnect (LVD), short-range wireless (900MHz), multi-function programmable lighting control, support for up to (4) beacons, auto-dimming, and a scheduler all-in-one compact enclosure.

FUNCTIONS

NET/MODE

Each crosswalk unit comes preprogrammed with 15 different light modes. These modes are used for a variety of different applications and K&K products. You unit will come preset for its intended use.

GROUPING

A single CrossTalk Crosswalk controller can monitor and control up to 15 additional CrossTalk units (for a total of 16 units in a "group"). Each CrossTalk unit has a GROUP switch (0-15) which allows CrossTalk units to be "grouped" together. All devices with same group number can communicate with each other. This grouping function allows multiple, separate CrossTalk applications to operate in the same general location (e.g. multiple cross-walks or schools on the same street) yet provide independent control of each CrossTalk "group". In most school lighting applications, for example, there is a designated "primary" CrossTalk unit (the unit typically equipped with a cellular modem) and one or more "secondary" CrossTalk units.

Set the GROUP switch to the same setting for all units being used in the same location or system.

TIMER

CrossTalk Crosswalk units have a built in timer, that is manually adjustable. This timer controls how long the lights flash based on a mode. This timer is not applicable to modes that are preset to a 24/7 flash pattern. To set the timer, first set your top dial. The top dial is your base time. It ranges from 1 second, up to 1 hour. Next, set your Scale dial. The scale is a multiplier for the Time dial. It multiplies the time by the factor on the dial. For example, if your top dial is set to 15 sec, your Scale dial to 3, your final run time is 45 sec. This is to give the customer a range of times to use for their specific application.
