RE: Fiber Material

Fiber Material HB-77

Vulcanized Fibre is a recognized component listed under file number 355656 (S). Our UL file does not distinguish between Commercial Grade and Electric Grade (often referred to as Fishpaper). U.L does not make judgements as to the appropriateness of a material for one application or another.

Both ASTM and NEMA define the grades of vulcanized fibre according to end use requirements. Electrical grade VF is expected to have higher tear strength, flexural strength, and e=dielectric strength.

Based on a series of Certified Test Results, our HB-77 Fibre meets or exceeds the standard requirements for Electrical Grade Fishpaper in thickness of .010 or greater.

We also believe that most of our Commercial HB-77 Fibre items meet or exceed the basic requirements for Electrical Grade Fibre, per ASTM D710, NEMA,VU-1, and MIL-I-695-F.
