BID FORM
Non Public Works

All Public Work Projects are required to use the Louisiana Uniform Public Work Bid Form

All prices must be held firm unless an escalation provision is requested in this bid. Jefferson Parish will allow one escalation during the term of the contract, which may not exceed the U.S. Bureau of Labor Statistics National Index for all Urban Consumers, unadjusted 12 month figure. The most recently published figure issued at the time an adjustment is requested will be used. A request must be made in writing by the vendor, and the escalation will only be applied to purchases made after the request is made.

Are you requesting an escalation provision?

YES _____ NO X

MAXIMUM ESCALATION PERCENTAGE REQUESTED _____%

INITIAL BID PRICES WILL REMAIN FIRM THROUGH THE DATE OF 11/16/18.

For the purposes of comparison of bids when an escalation provision is requested, Jefferson Parish will apply the maximum escalation percentage quoted by the bidder to the period to which it is applied in the bid. The initial price and the escalation will be used to calculate the total bid price. It will be assumed, for comparison of prices only, that an equal amount of material or labor is purchased each month throughout the entire contract.

As a minimum, nameplates for motors shall include the manufacturer's name and model number, serial number, horsepower, speed, input voltage, amps, number of cycles, power and service factors and point of assembly.
- D. All electrical materials and equipment shall be Underwriters Laboratories Inc. listed, and NEMA rated.

2.02 CONDITIONS OF OPERATION

- A. The pump shall be a totally submersible pump as listed in the table and manufactured by Fairbanks Morse Pump Company or equal. The supplied pump must be able to fit into the existing opening and seat onto the existing base elbows with no modifications. The

supplied pump shall be identical in hydraulic and electrical performance to the two (2) existing Fairbanks Morse Pumps.

- B. Each pump shall be designed for the conditions of service listed in these specifications.

Where total head (TH) is referred to in conjunction with the specified discharge requirements, it shall be understood to consist of the sum of the pressure head plus the velocity head, in feet, at the discharge nozzle of the pump minus the pressure head and the velocity head at the suction nozzle of the pump. The efficiency of the pump shall be understood to be based upon total head as just defined.

2.03 PUMP CONSTRUCTION

- A. The impeller shall be balanced non-clogging type made of close-grained cast iron conforming to ASTM A48 Class 30. The impeller shall be of one piece; single suction, enclosed, two blade radial flow design with well-rounded leading vanes and then tapered toward the trailing edge for a circular flow pattern. The waterways through the impeller will have extremely smooth contours, devoid of sharp corners so as to prevent rags or stringy, fibrous material from catching or clogging. The clearance between the full diameter impeller outside diameter and cutwater shall be capable of passing a solid sphere as listed in these specifications. The impeller is to be balanced and secured to the shaft by means of a bolt, washer, and key. The arrangement shall be such that the impeller cannot be loosened from torque in either forward or reverse rotation. Wiper vanes on the back impeller shroud are not allowed.
- B. The volute shall be matched to the impeller and made of close-grained cast iron conforming to ASTM A48 Class 30. The volute is to be of one-piece circular constant flow, equalizing pressure design with smooth fluid passages large enough to pass any size solid that can pass through the impeller. The volute shall be centerline discharge. The pump discharge elbow interface shall be integral to the volute and not a bolt on sealing flange.
- C. A separately cast close-grained cast iron back head conforming to ASTM A48 Class 30 shall be provided.
- D. The pump shaft shall be 416 Stainless Steel of sufficient diameter to carry the maximum loads imposed and to prevent vibration and fatigue. The shaft shall be accurately machined along its entire length and precision ground at bearing locations. Radial bearings and thrust bearing shall be grease lubricated designed to carry the hydraulic radial loads encountered in the service conditions. Bearing shall be designed for a nominal L10 life of 100,000 hrs. per AFBMA at best efficiency point.
- E. The pump shall be supplied with a non-sparking slide bracket designed to lower the pump along (2) 3" 304 SS guide rails and fit directly onto the new or existing 16" discharge elbows.
- F. The volute casing, back head, and frame shall be manufactured with concentric shoulder fits to assure accurate alignment. All machine bolts, nuts, and cap screws shall be stainless steel.

- G. Pump shall be provided with impeller and volute axial type wear rings. Impeller wear ring shall be 300-350 BHN 400 series stainless; the volute shall have wear rings of 410-484 BHN.

2.04 PUMP DRIVE SYSTEM

- A. Each submersible solids handling pump shall be driven by a completely sealed, electric submersible squirrel cage induction motor, inverter duty rated per NEMA MG 1, revision 3 part 31, section 31.40.4, rated for use with VFD's. The motor nameplate horsepower rating shall not be exceeded by the brake horsepower requirements of the specified head and capacity requirements. Motor shall be suitable for operation in an environment.
- B. The submersible motor shall be U.L. Listed for Class 1, Division 1, Group C & D explosion proof location as defined by the National Electric Code. All electrical components shall be housed in an air-filled, cast iron, watertight enclosure that is sealed by the use of O-rings and shall have rabbet joints with an extra overlap. The pump shall be supplied with 120' of flexible UL approved electrical motor and sensor cables.
- C. The stator winding and lead shall be insulated for continuous duty in 40 C rise liquids. The motor shall be designed for continuous duty capable of minimum of ten (10) starts per hour. The motor shaft shall be 416 stainless steel; the rotor to be dynamically balanced to meet NEMA vibration limits; all hardware to be stainless steel. Cable leads are to allow the connection of a cable to the motor, to be accomplished in the field without soldering cable. All leads are to be sealed and designed to prevent cable wicking to conduit box located on top of the motor. Individual wires shall have the insulation removed and epoxy potted to prevent wicking into the motor area. Grommets or similar compression only systems are not allowed.
- D. Each pump shall be provided with a tandem mechanical rotation shaft seal system. The upper seal shall be hydraulically balanced incorporating a non-clogging polymeric body acting as a spring mechanism with high grade carbon vs. 99.5 % ceramic faces lapped to within 3 helium light bands. The seal shall be installed using a snap ring on the polymeric body and a positive locator machined in the ID of the polymeric body. All O-rings shall be high temperature FKM O-rings. The lower seal shall be of similar construction with the faces materials being silicon carbide vs. tungsten carbide lapped to within 3 helium light bands. Each pump shall be tested and data recorded at its operating conditions of service as listed in Paragraph 1.05 and the pump shall be tested and data recorded for five (5) different operating points including shut-off head. Sufficient test point readings shall be made to establish complete head flow capacity, efficiency and brake horsepower curves for each pump.
 - 2. All gauges and other test instruments shall be calibrated within 30 days of the scheduled test and certified calibration data shall be provided. All Venturi flow meters shall be calibrated within two years of the scheduled test and certified calibration data shall be provided.
